### California Proposition 65

⚠️ **WARNING** ⚠️

Engine exhaust, some of its constituents, certain vehicle components and fluids, contain or emit chemicals known to the State of California to cause cancer and birth defects or other reproductive harm.

### IMPORTANT

The engine in this machine is not equipped by the manufacturer with a standard spark arrester. It is a violation of California Public Resource Code Section 4442 to use or operate this engine on or near any forest-covered, brush-covered land, or grass-covered land unless the exhaust system is equipped with a working spark arrester meeting state laws. Other states or federal areas may have similar laws.
UNIVERSAL SYMBOLS

As a guide to the operation of your tractor, various universal symbols have been utilized on the instruments and controls. The symbols are shown below with an indication of their meaning.

- Safety Alert Symbol
- Diesel Fuel
- Fuel-Level
- Engine-Rotational Speed
- Hourmeter/Elapsed Operating Hours
- Engine Coolant-Temperature
- Brake System
- Parking Brake
- Battery Charging Condition
- Engine Oil-Pressure
- Turn Signal
- Engine-Stop
- Engine-Run
- Diesel Preheat/Glow Plugs (Low Temperature Start Aid)
- Starter Control
- Power Take-Off Control-Off Position (Disengaged)
- Power Take-Off Control-On Position (Engaged)
- Differential Lock
- Position Control-Raised Position
- Position Control-Lowered Position

- 3-Point Lowering Speed Control
- Speed Set
- Remote Cylinder-Retract
- Remote Cylinder-Extend
- Steering Wheel-Tilt Control
- Lock
- Unlock
- Hazard Warning Lights
- Headlight
- Work Light
- 4-Wheel Drive-On
- 4-Wheel Drive-Off
- Fast
- Slow

- Read Operator’s Manual
- Tractor-Forward Movement-Overhead View of Machine
- Tractor-Rearward Movement-Overhead View of Machine
- Engine Speed Control
- Master System Warning
FOREWORD

You are now the proud owner of a KUBOTA Tractor. This tractor is a product of KUBOTA quality engineering and manufacturing. It is made of fine materials and under a rigid quality control system. It will give you long, satisfactory service. To obtain the best use of your tractor, please read this manual carefully. It will help you become familiar with the operation of the tractor and contains many helpful hints about tractor maintenance. It is KUBOTA's policy to utilize as quickly as possible every advance in our research. The immediate use of new techniques in the manufacture of products may cause some small parts of this manual to be outdated. KUBOTA distributors and dealers will have the most up-to-date information. Please do not hesitate to consult with them.

SAFETY FIRST

This symbol, the industry's "Safety Alert Symbol", is used throughout this manual and on labels on the machine itself to warn of the possibility of personal injury. Read these instructions carefully. It is essential that you read the instructions and safety regulations before you attempt to assemble or use this unit.

⚠️ DANGER : Indicates an imminently hazardous situation which, if not avoided, will result in death or serious injury.

⚠️ WARNING : Indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury.

⚠️ CAUTION : Indicates a potentially hazardous situation which, if not avoided, could result in minor or moderate injury.

IMPORTANT : Indicates that equipment or property damage could result if instructions are not followed.

NOTE : Gives helpful information.

</table>
SAFE OPERATION

Careful operation is your best insurance against an accident. Read and understand this manual carefully before operating the tractor.

All operators, no matter how much experience they may have, should read this and other related manuals before operating the tractor or any implement attached to it. It is the owner's obligation to instruct all operators in safe operation.

1. BEFORE OPERATING THE TRACTOR

1. Know your equipment and its limitations. Read this entire manual before attempting to start and operate the tractor.
2. Pay special attention to the danger, warning and caution labels on the tractor.
3. Do not operate the tractor or any implement attached to it while under the influence of alcohol, medication, controlled substances or while fatigued.
4. Before allowing other people to use your tractor, explain how to operate and have them read this manual before operation.
5. Never wear loose, torn, or bulky clothing around tractor. It may catch on moving parts or controls, leading to the risk of an accident. Use additional safety items, e.g. hard hat, safety boots or shoes, eye and hearing protection, gloves, etc., as appropriate or required.
6. Do not allow passengers to ride on any part of the tractor at anytime. The operator must remain in the tractor seat during operation.
7. Check brakes, clutch, linkage pins and other mechanical parts for improper adjustment and wear. Replace worn or damaged parts promptly. Check the tightness of all nuts and bolts regularly. (For further details, see "MAINTENANCE" section.)
8. Keep your tractor clean. Dirt, grease, and trash build up may contribute to fires and lead to personal injury.
9. Use only implements meeting the specifications listed under "IMPLEMENT LIMITATIONS" in this manual or implements approved by KUBOTA.
10. Use proper weights on the front or rear of the tractor to reduce the risk of upsets. When using the front loader, put an implement or ballast on the 3-point hitch to improve stability. Follow the safe operating procedures specified in the implement or attachment manual.

11. The narrower the tread, the greater the risk of a tractor upset. For maximum stability, adjust the wheels to the widest practical tread width for your application. (See "TIRES, WHEELS AND BALLAST" section.)

12. Do not modify the tractor. Unauthorized modification may affect the function of the tractor, which may result in personal injury.

◆ CAB, ROPS

1. KUBOTA recommends the use of a CAB or Roll Over Protective Structures (ROPS) and seat belt in almost all applications. This combination will reduce the risk of serious injury or death, should the tractor be upset. Check for overhead clearance which may interfere with a CAB or ROPS.
2. Set parking brake and stop engine. Remove any obstruction that may prevent raising or folding of the ROPS. Do not allow any bystanders. Always perform function from a stable position at the rear of the tractor. Hold the top of the ROPS securely when raising or folding. Make sure all pins are installed and locked.
3. If the CAB or ROPS is loosened or removed for any reason, make sure that all parts are reinstalled correctly before operating the tractor.
4. Never modify or repair any structural member of a CAB or ROPS because welding, bending, drilling, grinding, or cutting may weaken the structure.
5. If any structural member of the CAB or ROPS is damaged, replace the entire structure at your local KUBOTA Dealer.
6. If the tractor is equipped with a foldable ROPS it may be temporarily folded down only when absolutely necessary for areas with height constraints. (There is no operator protection provided by the ROPS in the folded position. For operator safety the ROPS should be placed in the upright and locked position and the seat belt fastened for all other operations.)
7. Always use the seat belt if the tractor has a CAB or ROPS.
Do not use the seat belt if a foldable ROPS is down or there is no ROPS. Check the seat belt regularly and replace if frayed or damaged.

5. Check before each use that operator presence controls are functioning correctly. Test safety systems. (See "Checking Engine Start System" in "EVERY 50 HOURS" in "PERIODIC SERVICE" section.) Do not operate unless they are functioning correctly.

◆ Working
1. Pull only from the drawbar. Never hitch to axle housing or any other point except drawbar; such arrangements will increase the risk of serious personal injury or death due to a tractor upset.

2. OPERATING THE TRACTOR

Operator safety is a priority. Safe operation, specifically with respect to overturning hazards, entails understanding the equipment and environmental conditions at the time of use. Some prohibited uses which can affect overturning hazards include traveling and turning with implements and loads carried too high etc. This manual sets forth some of the obvious risks, but the list is not, and cannot be, exhaustive. It is the operator's responsibility to be alert for any equipment or environmental condition that could compromise safe operation.

◆ Starting
1. Always sit in the operator's seat when starting engine or operating levers or controls. Adjust seat per instructions in the operating the tractor section. Never start engine while standing on the ground.
2. Before starting the engine, make sure that all levers (including auxiliary control levers) are in their neutral positions, that the parking brake is engaged, and that both the clutch and the Power Take-Off (PTO) are disengaged or "OFF".
   Fasten the seat belt if the tractor has a CAB or a foldable ROPS in the upright and locked position.
3. Do not start engine by shorting across starter terminals or bypassing the safety start switch. Machine may start in gear and move if normal starting circuitry is bypassed.
4. Do not operate or idle engine in a non-ventilated area. Carbon monoxide gas is colorless, odorless, and deadly.

2. For trailing PTO-driven implements, set the drawbar to the towing position.
3. Attach pulled or towed loads to the drawbar only.
4. Keep all shields and guards in place. Replace any that are missing or damaged.
5. Avoid sudden starts. To avoid upsets, slow down when turning, on uneven ground, and before stopping.
6. The tractor cannot turn with the differential locked and attempting to do so could be dangerous.
7. Do not operate near ditches, holes, embankments, or other ground surface features which may collapse under the tractor's weight. The risk of tractor upset is even higher when the ground is loose or wet. Tall grass can hide obstacles, walk the area first to be sure.
8. Watch where you are going at all times. Watch for and avoid obstacles. Be alert at row ends, near trees, and other obstructions.
9. When working in groups, always let the others know what you are going to do before you do it.
10. Never try to get on or off a moving tractor.
11. Always sit in the operator's seat when operating levers or controls.
12. Do not stand between tractor and implement or trailed vehicle unless parking brake is applied.

◆ Safety for children
Tragedy can occur if the operator is not alert to the presence of children. Children generally are attracted to machines and the work they do.
1. Never assume that children will remain where you last saw them.
2. Keep children out of the work area and under the watchful eye of another responsible adult.
3. Be alert and shut your machine down if children enter the work area.
4. Never carry children on your machine. There is no safe place for them to ride. They may fall off and be run over or interfere with your control of the machine.
5. Never allow children to operate the machine even under adult supervision.
6. Never allow children to play on the machine or on the implement.
7. Use extra caution when backing up. Look behind and down to make sure area is clear before moving.

◆ Operating on slopes
Slopes are a major factor related to loss-of-control and tip-over accidents, which can result in severe injury or death.
All slopes require extra caution.
1. To avoid upsets, always back up steep slopes. If you cannot back up the slope or if you feel uneasy on it, do not operate on it. Stay off slopes too steep for safe operation.
2. Driving forward out of a ditch, mired condition or up a steep slope increases the risk of a tractor to be upset backward. Always back out of these situations. Extra caution is required with 4-wheel drive models because their increased traction can give the operator false confidence in the tractor’s ability to climb slopes.
3. Keep all movement on slopes slow and gradual. Do not make sudden changes in speed, direction or apply brake and make sudden motions of the steering wheel.
4. Avoid disengaging the clutch or changing gears speed when climbing or going down a slope. If on a slope disengaging the clutch or changing gears to neutral could cause loss of control.
5. Special attention should be made to the weight and location of implements and loads as such will affect the stability of the tractor.
6. To improve stability on slope, set widest wheel tread as shown in “TIRES, WHEELS AND BALLAST” section. Follow recommendations for proper ballasting.

◆ Driving the tractor on the road
1. Lock the 2 brake pedals together to help assure straight-line stops. Uneven braking at road speeds could cause the tractor to tip over.
2. Check the front wheel engagement. The braking characteristics are different between 2 and 4-wheel drive. Be aware of the difference and use carefully.
3. Always slow the tractor down before turning. Turning at high speed may tip the tractor over.
4. Make sure that the Slow Moving Vehicle (SMV) sign is clean and visible. Use hazard lights and turn signals as required.
5. Observe all local traffic and safety regulations.
6. Turn the headlights on. Dim them when meeting another vehicle.
7. Drive at speeds that allow you to maintain control at all times.
8. Do not apply the differential lock while traveling at road speeds. The tractor may run out of control.
9. Avoid sudden motions of the steering wheel as they can lead to a dangerous loss of stability. The risk is especially great when the tractor is traveling at road speeds.
10. Keep the ROPS in the "UP" position and wear the seat belt when driving the tractor on the road. Otherwise, you will not be protected in the event of a tractor roll-over.
11. Do not operate an implement while the tractor is on the road. Lock the 3-point hitch in the raised position.
12. When towing other equipment, use a safety chain and place an SMV emblem on it as well.

3. **PARKING THE TRACTOR**

1. Disengage the PTO, lower all implements to the ground, place all control levers in their neutral positions, set the parking brake, stop the engine, remove the key from the ignition and lock the cab door (if equipped). Leaving transmission in gear with the engine stopped will not prevent tractor from rolling.
2. Make sure that the tractor has come to a complete stop before dismounting.
3. Avoid parking on steep slopes, if at all possible park on a firm and level surface; if not, park across a slope with chock the wheels. Failure to comply with this warning may allow the tractor to move and could cause injury or death.

4. **OPERATING THE PTO**

1. Wait until all moving components have completely stopped before getting off the tractor, connecting, disconnecting, adjusting, cleaning, or servicing any PTO driven equipment.
2. Keep the PTO shaft cover in place at all times. Replace the PTO shaft cap when the shaft is not in use.

3. Before installing or using PTO driven equipment, read the manufacturer's manual and review the safety labels attached to the equipment.
4. When operating stationary PTO driven equipment, always apply the tractor parking brake and place chocks behind and in front of the rear wheels. Stay clear of all rotating parts. Never step over rotating parts.

5. **USING 3-POINT HITCH**

1. Use the 3-point hitch only with equipment designed for 3-point hitch usage.
2. When using a 3-point hitch mounted implement, be sure to install the proper counterbalance weight on the front of the tractor.
3. When transporting on the road, set the implement lowering speed knob in the "LOCK" position to hold the implement in the raised position.
6. SERVICING THE TRACTOR

Before servicing the tractor, park it on a firm, flat and level surface, set the parking brake, lower all implements to the ground, place the gear shift lever in neutral, stop the engine and remove the key.

1. Allow the tractor time to cool off before working on or near the engine, muffler, radiator, etc.
2. Do not remove radiator cap while coolant is hot. When cool, slowly rotate cap to the first stop and allow sufficient time for excess pressure to escape before removing the cap completely. If the tractor has a coolant recovery tank, add coolant or water to the tank, not the radiator. (See "Checking Coolant Level" in "DAILY CHECK" in "PERIODIC SERVICE" section.)
3. Always stop the engine before refueling. Avoid spills and overfilling.
4. Do not smoke when working around battery or when refueling. Keep all sparks and flames away from battery and fuel tank. The battery presents an explosive hazard, because it gives off hydrogen and oxygen especially when recharging.
5. Before "jump starting" a dead battery, read and follow all of the instructions. (See "JUMP STARTING" in "OPERATING THE ENGINE" section.)
6. Keep first aid kit and fire extinguisher handy at all times.
7. Disconnect the battery's ground cable before working on or near electric components.
8. To avoid the possibility of battery explosion, do not use or charge the refillable type battery if the fluid level is below the LOWER (lower limit level) mark. Check the fluid level regularly and add distilled water as required so that the fluid level is between the UPPER and LOWER levels.
9. To avoid sparks from an accidental short circuit, always disconnect the battery's ground cable (-) first and reconnect it last.
10. Do not attempt to mount a tire on a rim. This should be done by a qualified person with the proper equipment.
11. Always maintain the correct tire pressure. Do not inflate tires above the recommended pressure shown in the operator's manual.
12. Securely support the tractor when either changing wheels or adjusting the wheel tread width.
13. Make sure that wheel bolts have been tightened to the specified torque.
14. Do not work under any hydraulically supported devices. They can settle, suddenly leak down, or be accidentally lowered. If it is necessary to work under tractor or any machine elements for servicing or adjustment, securely support them with stands or suitable blocking beforehand.
15. Escaping hydraulic fluid under pressure has sufficient force to penetrate skin, causing serious personal injury. Before disconnecting hydraulic lines, be sure to release all residual pressure. Before applying pressure to the hydraulic system, make sure that all connections are tight and that all lines, pipes, and hoses are free of damage.

16. Fluid escaping from pinholes may be invisible. Do not use hands to search for suspected leaks; use a piece of cardboard or wood. Use of safety goggles or other eye protection is also highly recommended. If injured by escaping fluid, see a medical doctor at once. This fluid will produce gangrene or severe allergic reaction.

(1) Cardboard
(2) Hydraulic line
(3) Magnifying glass
7. DANGER, WARNING AND CAUTION LABELS

(1) Part No. TA240-9848-2

WARNING

TO AVOID INJURY OR DEATH FROM ROLL-OVER:
- Keep Roll-Over Protective Structures (ROPS) in the upright and locked position.
- Fasten SEAT BELT before operating.

THERE IS NO OPERATOR PROTECTION WHEN THE ROPS IS IN THE FOLDED POSITION:
- Check the operating area and fold the ROPS only when absolutely necessary.
- Do not wear SEAT BELT if ROPS is folded.
- Raise and lock ROPS as soon as vertical clearance allows.
- Read ROPS related instructions and warnings.

(2) Part No. TC420-4956-1

Diesel fuel only

ULTRA LOW SULFUR DIESEL
FUEL ONLY

No fire

(3) Part No. 6C090-4958-2

Do not get your hands close to engine fan and fan belt.
**WARNING**

1. Attach pulled or towed loads to the drawbar only.
2. Use the 3-point hitch only with equipment designed for 3-point hitch usage.

**DANGER**

TO AVOID POSSIBLE INJURY OR DEATH FROM A MACHINE RUNAWAY.

1. Do not start engine by shorting across starter terminals or bypassing the safety start switch. Machine may start in gear and move if normal starting circuitry is bypassed.
2. Start engine only from operator's seat with transmission and PTO OFF. Never start engine while standing on the ground.

**WARNING**

Never modify or repair a ROPS because welding, grinding, drilling or cutting any portion may weaken the structure.

**WARNING**

TO AVOID PERSONAL INJURY OR DEATH WHEN RAISING OR FOLDING ROPS:

- Set parking brake and stop engine.
- Remove any obstruction that may prevent raising or folding of the ROPS.
- Do not allow any bystanders.
- Always perform function from a stable position at the rear of the tractor.
- Hold the top of the ROPS securely when raising or folding.
- Make sure all pins are installed and locked.

**A DANGER**

1. Remove all grass, weeds, and other fuel sources around the tractor before starting the engine.
2. Do not use the tractor in an area where there are flammable liquids or gases.
3. Ensure the area is well ventilated before starting the engine.
4. Keep a fire extinguisher within reach at all times.

**WARNING**

Do not get your hands close to engine fan and fan belt.

**WARNING**

Operation of this equipment may create sparks that can start fires around dry vegetation. A spark arrester may be required. The operator should contact local fire agencies for laws or regulations relating to fire prevention requirements.
(1) Part No. 6C300-3012-2

**WARNING**

TO AVOID PERSONAL INJURY OR DEATH:
1. Read and understand the operator's manual before operation.
2. Before starting the engine, make sure that everyone is at a safe distance from the tractor and that the PTO is OFF.
3. Do not allow passengers on the tractor at any time.
4. Before allowing other people to use the tractor, have them read the operator's manual.
5. Check the tightness of all nuts and bolts regularly.
6. Keep all shields in place and stay away from all moving parts.
7. Lock the two brake pedals together before driving on the road.
8. Slow down for turns, or rough roads, or when applying individual brakes.
9. On public roads use SMV emblem and hazard lights, if required by local traffic and safety regulations.
10. Pull only from the drawbar.
11. Before dismounting, lower the implement to the ground, set the parking brake, stop the engine and remove the key.
12. Securely support tractor and implements before working underneath.

![Diagram of a tractor with a battery and a drawing of a battery with warning signs](image1)

**DANGER**

Due to hydrogen gas generated from battery, handling without care can cause fire and explosion. This 12V battery is only for starting engine. Do not apply this product for other uses.

Charge the battery only at well-ventilated places, and avoid shorts or sparks.

Refer to the Instruction Manual of Vehicle or Battery before using booster cable.

BASFURIC ACID MAY CAUSE BLINDNESS OR SEVERE BURN. IN CASE EYES, SKIN, CLOTHES OR ANY ARTICLES ARE STAINED WITH ACID, FLUSH OBJECTS IMMEDIATELY WITH WATER. IF ACID BURNS EYES, DRINK PLENTY OF WATER PROMPTLY. IN CASE OF ACCIDENT, CONTACT A DOCTOR PROMPTLY.

BATTERY FILLED WITH ACID (DO NOT TILT OR SPILL) — FLAMMABLE. DO NOT CHARGE NEAR FIRE OR SPARKS.

DO NOT CHARGE RAPIDLY - DO NOT DISASSEMBLE THE BATTERY (SEALED TYPE).

**PROPOSITION 65 WARNING**

Battery posts, terminals, and related accessories contain lead and lead compounds, chemicals known to the State of California to cause cancer and reproductive harm. Wash hands after handling.

(2) Part No. 6C540-4742-1

**WARNING**

BEFORE DISMOUNTING TRACTOR:
1. ALWAYS SET PARKING BRAKE.
Leaving transmission in gear with the engine stopped will not prevent tractor from rolling.
2. PARK ON LEVEL GROUND WHEREVER POSSIBLE.
If parking on a slope, position tractor across the slope.
3. LOWER ALL IMPLEMENTS TO THE GROUND.
4. STOP THE ENGINE.

(3) Part No. 6C150-4743-1

**WARNING**

BEFORE DISMOUNTING TRACTOR:
1. ALWAYS SET PARKING BRAKE.
Leaving transmission in gear with the engine stopped will not prevent tractor from rolling.
2. PARK ON LEVEL GROUND WHEREVER POSSIBLE.
If parking on a slope, position tractor across the slope.
3. LOWER ALL IMPLEMENTS TO THE GROUND.
4. STOP THE ENGINE.
8. CARE OF DANGER, WARNING AND CAUTION LABELS

1. Keep danger, warning and caution labels clean and free from obstructing material.
2. Clean danger, warning and caution labels with soap and water, dry with a soft cloth.
3. Replace damaged or missing danger, warning and caution labels with new labels from your local KUBOTA Dealer.
4. If a component with danger, warning and caution label(s) affixed is replaced with new part, make sure new label(s) is (are) attached in the same location(s) as the replaced component.
5. Mount new danger, warning and caution labels by applying on a clean dry surface and pressing any bubbles to outside edge.
SERVICING OF TRACTOR

Your dealer is interested in your new tractor and has the desire to help you get the most value from it. After reading this manual thoroughly, you will find that you can do some of the regular maintenance yourself. However, when in need of parts or major service, be sure to see your KUBOTA Dealer.

For service, contact the KUBOTA Dealership from which you purchased your tractor or your local KUBOTA Dealer. When in need of parts, be prepared to give your dealer the tractor, CAB/ROPS and engine serial numbers. Locate the serial numbers now and record them in the space provided.

</tbody>
</table>

(To be filled in by purchaser)

♦ Warranty
This tractor is warranted under the KUBOTA Limited Express Warranty, a copy of which may be obtained from your selling dealer. No warranty shall, however, apply if the tractor has not been handled according to the instruction given in the Operator’s Manual even it is within the warranty period.

♦ Scrapping the tractor and its procedure
To put the tractor out of service, correctly follow the local rules and regulations of the country or territory where you scrap it. If you have questions, consult your local KUBOTA Dealer.

IMPLEMENT LIMITATIONS

The KUBOTA Tractor has been thoroughly tested for proper performance with implements sold or approved by KUBOTA. Use with implements which are not sold or approved by KUBOTA and which exceed the maximum specifications listed below, or which are otherwise unfit for use with the KUBOTA Tractor may result in malfunctions or failures of the tractor, damage to other property and injury to the operator or others. [Any malfunctions or failures of the tractor resulting from use with improper implements are not covered by the warranty.]

Implement weight.................................The implement's weight which can be put on the lower link : W1
Max. drawbar load..............................W2
Trailer loading weight .......................The max. loading weight for trailer (without trailer’s weight) : W3

NOTE:
- Implement size may vary depending on soil operating conditions.
- Strictly follow the instructions outlined in the operator’s manual of the mounted or trailed machinery or trailer, and do not operate the combination tractor - machine or tractor - trailer unless all instructions have been followed.
- Forestry Application
  Following hazards exist;
  (a) toppling trees, primarily in case a rear-mounted tree grab-crane is mounted at the rear of the tractor;
  (b) penetrating objects in the operator’s enclosure, primarily in case a winch is mounted at the rear of the tractor.
Optional equipments such as OPS (Operator Protective Structure), FOPS (Falling Object Protective Structure), etc. to deal with these hazards and other related hazards are not available for this tractor. Without such optional equipment use is limited to tractor specific applications like transport and stationary work.

PRE-OPERATION CHECK

DAILY CHECK
To prevent trouble from occurring, it is important to know the condition of the tractor well. Check it before starting.

⚠️ WARNING
To avoid personal injury or death:
- Be sure to check and service the tractor on a level surface with the engine shut off and the parking brake "ON" and implement lowered to the ground.

Check item
- Walk around inspection
- Check engine oil level
- Check transmission oil level
- Check coolant level
- Clean grill and radiator screen
- Check air cleaner evacuator valve
  (When used in a dusty place)
- Check brake pedal
- Check indicators, gauges and meter
- Check lights
- Check wire harness
- Check Seat belt and ROPS
- Check movable parts
- Refuel
  (See "DAILY CHECK" in "PERIODIC SERVICE" section.)
- Care of danger, warning and caution labels
  (See "DANGER, WARNING AND CAUTION LABELS" in "SAFE OPERATION" section.)
OPERATING THE ENGINE

WARNING
To avoid personal injury or death:
- Read “Safe Operation” in the front of this manual.
- Read the danger, warning and caution labels located on the tractor.
- To avoid the danger of exhaust fume poisoning, do not operate the engine in a closed building without proper ventilation.
- Never start engine while standing on ground. Start engine only from operator’s seat.
- Make it a rule to set all shift levers to the "NEUTRAL" positions and to place the PTO lever in "OFF" position before starting the engine.

IMPORTANT:
- Do not use starting fluid or ether.
- To protect the battery and the starter, make sure that the starter is not continuously turned for more than 30 seconds.

STARTING THE ENGINE

1. Make sure the parking brake is set.

   1. To set the parking brake:
      (1) Interlock the brake pedals.
      (2) Depress the brake pedals.
      (3) Latch the brake pedals with the parking brake lever.

   2. To release the parking brake, depress the brake pedals again.

   ![Diagram of parking brake](image)

   (1) Parking brake lever
   (A) Interlock the brake pedals
   (B) "DEPRESS"
   (C) "PULL DOWN"

NOTE:
- It is recommended that the operator practice engaging and disengaging the parking brake on a flat surface without the engine running before operating the tractor for the first time.

2. Place the PTO clutch lever in the "OFF" position.

   ![Diagram of PTO clutch lever](image)

   (1) PTO clutch lever
   (A) "ON" "ENGAGE"
   (B) "OFF" "DISENGAGE"
3. Place the speed set lever in "OFF" position. Place the speed control pedal in the "NEUTRAL" position. Place the range gear shift lever (L-M-H) in the "NEUTRAL" position.

4. Lock the loader control lever in the "LOCK" position.

5. Place the position control lever in the "LOWEST" position.

**NOTE:**
- Depress the both brake pedals together, doing so the speed set lever automatically returns to the off position.
- By removing your foot from the speed control pedal, it will allow the pedal to automatically return to the neutral position.
6. Set the throttle lever to about 1/2 way.

7. Insert the key into the key switch and turn it "ON".

◆ Check Easy Checker(TM) lamps:
When the key is turned "ON", lamps (3) (4) should come on. If trouble should occur at any location while the engine is running, the indicator lamp corresponding to problem will turn "ON".
8. Turn the key to "PREHEAT" position and hold it for about 2 to 3 seconds.

For the appropriate preheating time, refer to the table below:

<table>
<thead>
<tr>
<th>Temperature</th>
<th>Preheating Time</th>
</tr>
</thead>
<tbody>
<tr>
<td>Over 0 °C (32 °F)</td>
<td>2 to 3 sec.</td>
</tr>
<tr>
<td>0 to -5 °C (32 to 23 °F)</td>
<td>5 sec.</td>
</tr>
<tr>
<td>-5 to -15 °C (23 to 5 °F)</td>
<td>10 sec.</td>
</tr>
</tbody>
</table>

**NOTE:**
- Glow plug indicator (5) comes on while engine is being preheated.

9. Turn the key to "START" position and release when the engine starts.

**IMPORTANT:**
- Because of the safety devices, the engine will not start except when the PTO clutch lever is placed in the "OFF" position and speed control pedal is placed in the "NEUTRAL" position.

**Cold Weather Starting**
When the ambient temperature is below -5°C (23°F) and the engine is very cold. If the engine fails to start, turn off the key for 30 seconds. Then repeat steps 8 and 9. To protect the battery and the starter, make sure that the starter is not continuously turned for more than 30 seconds.

**Block Heater (Option)**
A block heater is available as an option from your dealer. It will assist you in starting your tractor when the ambient temperature is below -15°C (5°F).

10. Check to see that all the lamps on the Easy Checker(TM) are "OFF".

If any lamps stays on, immediately stop the engine and determine the cause.

---

**STOPPING THE ENGINE**

1. After slowing the engine to idle, turn the key to "OFF".
2. Remove the key.

**NOTE:**
- If key does not stop the engine, consult your local KUBOTA Dealer.
WARMING UP

**WARNING**
To avoid personal injury or death:
- Be sure to set the parking brake during warm-up.
- Be sure to set all shift levers to the "NEUTRAL" positions and to place the PTO clutch lever in the "OFF" position during warm-up.

For 5 minutes after engine start-up, allow the engine to warm up without applying any load, this is to allow oil to reach every engine part. If load should be applied to the engine without this warm-up period, trouble such as seizure, breakage or premature wear may develop.

---

**Warm-up Transmission Oil at Low Ambient Temperatures**
Hydraulic oil serves as transmission fluid. In cold weather, the oil will be cold, which will increase oil viscosity. This can cause delayed oil circulation or abnormally low hydraulic pressure for some time after engine start-up. This in turn can result in trouble in the hydraulic system. To prevent the above, observe the following instructions:

Warm up the engine at about 50% of rated rpm according to the table below:

<table>
<thead>
<tr>
<th>Ambient temperature</th>
<th>Warm-up time requirement</th>
</tr>
</thead>
<tbody>
<tr>
<td>Above 0 °C (32 °F)</td>
<td>At least 5 minutes</td>
</tr>
<tr>
<td>0 to -10 °C (32 to 14 °F)</td>
<td>5 to 10 minutes</td>
</tr>
<tr>
<td>-10 to -20 °C (14 to -4 °F)</td>
<td>10 to 15 minutes</td>
</tr>
<tr>
<td>Below -20 °C (-4 °F)</td>
<td>More than 15 minutes</td>
</tr>
</tbody>
</table>

**IMPORTANT:**
- Do not operate the tractor under full load condition until it is sufficiently warmed up.

---

JUMP STARTING

**WARNING**
To avoid personal injury or death:
- Battery gases can explode. Keep cigarettes, sparks, and flames away from battery.
- If tractor battery is frozen, do not jump start engine.
- Do not connect the other end of the negative (-) jumper cable to the negative (-) terminal of the tractor battery.

When jump starting the engine, follow the instructions below to safely start the engine.

1. Bring the helper vehicle with a battery of the same voltage as disabled tractor within easy cable reach. "THE VEHICLES MUST NOT TOUCH".
2. Engage the parking brakes of both vehicles and put the shift levers in neutral. Shut both engines off.
3. Wear eye protection and rubber gloves.
4. Attach the red clamp to the positive (red, (+) or pos.) terminal of the dead battery and clamp the other end of the same cable to the positive (red, (+) or pos.) terminal of the helper battery.
5. Clamp the other cable to the negative (black, (-) or neg.) terminal of the helper battery.
6. Clamp the other end to the engine block or frame of the disabled tractor as far from the dead battery as possible.
7. Start the helper vehicle and let its engine run for a few moments. Start the disabled tractor.
8. Disconnect the jumper cables in the exact reverse order of attachment. (Steps 6, 5 and 4).

![Connect cables in numerical order. Disconnect in reverse order after use.](image)

(1) Dead battery
(2) Jumper cables
(3) Helper battery

**IMPORTANT:**
- This machine has a 12volt negative (-) ground starting system.
Use only same voltage for jump starting.

Use of a higher voltage source on tractors electrical system could result in severe damage to tractor’s electrical system. Use only matching voltage source when “Jump starting” a low or dead battery condition.
OPERATING THE TRACTOR

OPERATING NEW TRACTOR

How a new tractor is handled and maintained determines the life of the tractor.

A new tractor just off the factory production line has been, of course, tested, but the various parts are not accustomed to each other, so care should be taken to operate the tractor for the first 50 hours at a slower speed and avoid excessive work or operation until the various parts become "broken-in." The manner in which the tractor is handled during the "breaking-in." period greatly affects the life of your tractor. Therefore, to obtain the maximum performance and the longest life of the tractor, it is very important to properly break-in your tractor. In handling a new tractor, the following precautions should be observed.

- Do not Operate the Tractor at Full Speed for the First 50 Hours
  - Do not start quickly nor apply the brakes suddenly.
  - In winter, operate the tractor after fully warming up the engine.
  - Do not run the engine at speeds faster than necessary.
  - On rough roads, slow down to suitable speeds.
  - Do not operate the tractor at fast speed.

The above precautions are not limited only to new tractors, but to all tractors. But it should be especially observed in the case of new tractors.

- Changing Lubricating Oil for New Tractors

The lubricating oil is especially important in the case of a new tractor. The various parts are not "broken-in" and are not accustomed to each other; small metal grit may develop during the operation of the tractor; and this may wear out or damage the parts. Therefore, care should be taken to change the lubricating oil a little earlier than would ordinarily be required.

For further details of change interval hours, see "MAINTENANCE" section.

BOARDING AND LEAVING THE TRACTOR

1. Never try to get on or off a moving tractor or jump off the tractor to exit.
2. Face the tractor when getting into or out of the tractor.
   - Do not use the controls as hand holds to prevent inadvertent machine movements.
3. Always keep steps and floor clean to avoid slippery conditions.

OPERATING FOLDABLE ROPS

WARNING

To avoid personal injury or death:
- When raising or folding the ROPS, apply parking brake, stop the engine and remove the key.
- Always perform function from a stable position at the rear of tractor.
- Fold the ROPS down only when absolutely necessary and fold it up and lock it again as soon as possible.
- Before proceeding to fold ROPS, check for any possible interference with installed implements and attachments.
- If interference occurs, contact your KUBOTA Dealer.

To Fold the ROPS

1. Remove both set bolts, maintain a hold on the ROPS.
2. Fold the ROPS.

⚠️ **CAUTION**
To avoid personal injury:
- Hold the ROPS tightly with both hands and fold the ROPS slowly and carefully.

3. Insert both set bolts and secure them with the hair pins.

⚠️ **CAUTION**
To avoid personal injury:
- Make sure that both set bolts are properly installed and secured with the hair pins.

---

**To Raise the ROPS to Upright Position**

1. Remove both hair pins and set bolts.

2. Raise ROPS to the upright position, maintain a hold on the ROPS.

⚠️ **CAUTION**
To avoid personal injury:
- Raise the ROPS slowly and carefully.

3. Insert both set bolts and secure them with the hair pins.

⚠️ **CAUTION**
To avoid personal injury:
- Make sure that both set bolts are properly installed as soon as the ROPS is in the upright position and secured with the hair pins.
**Adjustment of Foldable ROPS**

- Adjust free fall of the ROPS upper frame regularly.
- If you feel less friction in folding the ROPS, tighten the nut (1) until you feel the right friction in the movement.

**STARTING**

1. Adjusting the operator's position.

**NOTE:**

- The seat and suspension should be adjusted to ensure that the controls are comfortably at hand for the operator, ensuring that the operator maintains a good posture and minimizes risks from whole body vibration.

**Operator's Seat**

**WARNING**

To avoid personal injury or death:

- Make sure that the seat is completely secured after each adjustment.
- Do not allow any person other than the driver to ride on the tractor.

**Position adjustment**

Pull in the position adjust lever and slide the seat backward or forward, as required. The seat will lock in position when the lever is released.

**IMPORTANT:**

- After adjusting the operator's seat, be sure to check that the seat is properly locked.
Armrest angle adjustment
The armrest angle can be adjusted by the bolts (socket size 7/16 inch).

![Diagram showing armrest angle adjustment](1AGAEEIP030A)

(1) Bolt
(2) Armrest

## Seat Belt

**WARNING**
To avoid personal injury or death:
- Always use the seat belt when the ROPS is installed.
- Do not use the seat belt if a foldable ROPS is down or there is no ROPS.

Adjust the seat belt for proper fit and connect to the buckle. The seat belt is auto-locking retractable type.

![Diagram showing seat belt](1AGAEEIP003B)

(1) Seat belt

### Tilt Steering Adjustment

**CAUTION**
To avoid personal injury:
- Do not adjust the steering wheel while the tractor is in motion.

Press down the steering wheel pedal, to release the lock so the steering wheel can be adjusted to one of three desired positions.

![Diagram showing steering wheel tilt pedal](1AGAEEIP031A)

(1) Steering wheel tilt pedal
(A) "PRESS DOWN"
2. Selecting light switch positions.

### Head Light / Turn Signal / Hazard Light Switch

- **Head Light Switch**
  - (A) **OFF** ....Head light OFF.
  - (B) **ON** ....Head light ON.

- **Hazard Light**
  1. When hazard light switch is pushed, the hazard lights flash, along with the L/H and R/H indicators on the instrument panel.
  2. Push hazard light switch again to turn off the hazard lights.

- **Turn Signal with Hazard Light Switch On**
  1. To indicate a right turn with the hazard lights already flashing (hazard switch on), turn the turn signal switch clockwise.
  2. To indicate a left turn with the hazard lights already flashing, turn the turn signal switch counterclockwise.
  3. When the left or right turn signal is activated in combination with the hazard lights, the indicated turning light will flash and the other will stay on.

- **Turn Signal with Hazard Light Switch Off**
  1. To indicate a right turn without hazard lights (hazard switch off), turn the turn signal switch clockwise.
  2. To indicate a left turn without hazard lights, turn the turn signal switch counterclockwise.
  3. When the left or right turn signal is activated without the hazard lights, the indicated turning light will flash and the other will stay on.

**NOTE:**
- The hazard light switch is operative when the key switch is in either the "ON" or "OFF" positions.
- The turn signal light switch is only operative when the key switch is in the "ON" position.
- The indicator in the hazard light switch will light up when the head light switch is turned on.
- Be sure to return the turn signal switch to center position after turning.
### Tractor Lights

1. Head light
2. Turn signal / Hazard light
3. Tail light

### 3. Checking the brake pedal.

#### Brake Pedals (Right and Left)

**WARNING**

To avoid personal injury or death:
- Applying only one rear wheel brake at high speeds could cause the tractor to swerve or roll-over.

**WARNING**

To avoid personal injury or death:
- An accident may occur if the tractor is suddenly braked, such as by heavy towed loads shifting forward or loss of control.
- The braking characteristics are different between 2 and 4 wheel drive. Be aware of the difference and use carefully.
- When driving on icy, wet or loose surfaces, make sure the tractor is correctly ballasted to avoid skidding and loss of steering control. Operate at reduced speed.

1. Before operating the tractor on the road or before applying the parking brake, be sure to interlock the right and left pedals as illustrated below.
2. Use individual brakes to assist in making sharp turns at slow speeds (Field Operation Only). Disengage the brake pedal lock and depress only one brake pedal.
3. Be sure brake pedals have equal adjustment when using locked together.
4. Raise the implement.
   (See "HYDRAULIC UNIT" section)

5. Selecting the Travel Speed.

Range Gear Shift Lever (L-M-H)
The range gear shift can only be shifted when tractor is completely stopped.

IMPORTANT:
Do not force the range gear shift lever.
- If it is difficult to shift the range gear shift lever into the neutral position;
  (1) Depress the brake pedal firmly for several seconds.
  (2) Without reducing the brake pedal force, shift the range gear shift lever.
- If it is difficult to shift the range gear shift lever into "L", "M" or "H" from neutral position;
  (1) Slightly depress the speed control pedal to rotate the gears inside of transmission.
  (2) Release the speed control pedal to neutral position.
  (3) Shift the range gear shift lever.
- To avoid damage of transmission, stop tractor before shifting between ranges.
Front Wheel Drive Lever

WARNING
To avoid personal injury or death:
• Do not engage the front wheel drive when traveling at road speed.
• When driving on icy, wet or loose surfaces, make sure the tractor is correctly ballasted to avoid skidding and loss of steering control. Operate at reduced speed and engage front wheel drive.
• An accident may occur if the tractor is suddenly braked, such as by heavy towed loads shifting forward or loss of control.
• The braking characteristics are different between 2 and 4-wheel drive. Be aware of the difference and use carefully.

Use the lever to engage the front wheels with the tractor stopped. Shift the lever to "ON" to engage the front wheel drive.

1 AGAEFAP027C

(1) Front wheel drive lever "OFF"

IMPORTANT:
• To avoid damage of transmission, when front wheel drive lever is not smoothly shifted, slightly step forward or rearward on speed control pedal.
• Tires will wear quickly if front wheel drive is engaged on paved roads.

Front wheel drive is effective for the following jobs:
1. When greater pulling force is needed, such as working in a wet field, when pulling a trailer, or when working with a front-end loader.
2. When working in sandy soil.
3. When working on a hard soil where a rotary tiller might push the tractor forward.
4. Additional braking at reduced speeds.

6. Accelerate the Engine.

Hand Throttle Lever
Pulling the throttle lever back increases engine speed, and pushing it forward decreases engine speed.

7. Unlock the Parking Brake.

Parking Brake
To release the parking brake, depress the brake pedals again.

1 AGAEJAP012A

(1) Brake pedals (A) "DEPRESS"
8. Depress the Speed Control Pedal.

**Speed Control Pedal**

**WARNING**

To avoid personal injury or death:
- Do not operate if the tractor moves on level ground with the operator's foot off of Speed Control Pedal.
- Consult your local KUBOTA Dealer.

**Forward Pedal**
Depress the speed control pedal with the toe of your right foot to move forward.

**Reverse Pedal**
Depress the speed control pedal with the heel of your right foot to move backward.

---

**Speed Set Device**

**WARNING**

To avoid personal injury or death:
- Pull the speed set lever completely to the up position before starting the engine.
- Do not use the speed set device when driving on the road.
- Be sure to connect both the left and the right brakes to release the speed set device. The speed set device won't be released with singlebrake activation.

The Speed Set Device is designed for tractor operating efficiency and operator comfort. This device will provide a constant forward operating speed by mechanically holding the speed control pedal at a selected position.

**To engage Speed Set Device**
1. Accelerate speed to desired level using Speed Control Pedal, and push the speed set lever down to the "ON" position.
2. Release Speed Control Pedal and desired speed will be maintained.

**To disengage Speed Set Device**
- Pull the speed set lever upward.
- Depress both brake pedals.
NOTE:
• If you step on the pedal on the forward acceleration side, the speed set device will disengage.
• The speed set device does not disengage when the individual right or left brake is applied.
• Speed set device will not operate in reverse.
• When you stand up from the seat with the speed control pedal stepped on or the speed set device engaged (ON), the engine will stop regardless of whether the machine is moving or not. This is because the tractor is equipped with Operator Presence Control system (OPC).

IMPORTANT:
• To prevent the damage of speed set device, do not depress the reverse pedal when the speed set device is engaged.

STOPPING

■ Stopping
1. Slow the engine down.
2. Step on the brake pedal.
3. After the tractor has stopped, disengage the PTO, lower the implement to the ground, shift the transmission to neutral and set the parking brake.

CHECK DURING DRIVING

■ Immediately Stop the Engine if:
• The engine suddenly slows down or accelerates.
• Unusual noises suddenly are heard.
• Exhaust fumes suddenly become very dark.

■ Easy Checker (TM)
If the warning lamps of the Easy Checker(TM) come on during operation, immediately stop the engine, and find the cause as shown below.
Never operate the tractor while Easy Checker(TM) lamp is on.

- Engine oil pressure
If the oil pressure in the engine goes below the prescribed level, the warning lamp in the Easy Checker(TM) will come on.
If this should happen during operation, and it does not go off when the engine is accelerated to more than 1000 rpm, check level of engine oil.
(See "Checking Engine Oil Level" in "DAILY CHECK" in "PERIODIC SERVICE" section)

- Electrical charge
If the alternator is not charging the battery, the warning lamp in the Easy Checker(TM) will come on.
If this should happen during operation, check the electrical charging system or consult your local KUBOTA Dealer.

NOTE:
• For checking and servicing of your tractor, consult your local KUBOTA Dealer for instructions.
**Fuel Gauge**

When the key switch is on, the fuel gauge indicates the fuel level. Be careful not to empty the fuel tank. Otherwise, air may enter the fuel system. Should this happen, the system should be bled. (See "Bleeding Fuel System" in "SERVICE AS REQUIRED" in "PERIODIC SERVICE" section)

![Fuel Gauge Diagram](image1)

- (1) Fuel gauge
- (A) "EMPTY"
- (B) "FULL"

**Coolant Temperature Gauge**

- **WARNING**

  To avoid personal injury or death:
  - Do not remove radiator cap until coolant temperature is well below its boiling point. Then loosen the cap slightly to relieve any pressure before removing the cap completely.

1. With the key switch "ON", this gauge indicates the temperature of the coolant. "C" for "cold" and "H" for "hot".
2. If the indicator reaches the "H" position (red zone), engine coolant is overheated. Check the tractor by referring to "TROUBLESHOOTING" section.

![Coolant Temperature Gauge Diagram](image2)

- (1) Coolant temperature gauge
Hourmeter / Tachometer
This meter gives readings for engine speed, PTO shaft speed and the hours the tractor has been operated.
1. The tachometer indicates the engine speed and the 540 PTO shaft speed location on the dial.
2. The hourmeter indicates in 5 digits the hours the tractor has been used; the last digit indicates 1/10 of an hour.

PARKING

Parking

WARNING
To avoid personal injury or death:
• Always set the parking brake, stop the engine and remove the key before leaving the tractor seat.

1. When parking, be sure to set the parking brake.
   To set the parking brake:
   (1) Interlock the brake pedals.
   (2) Depress the brake pedals.
   (3) Latch the brake pedals with the parking brake lever.

2. Before getting off the tractor, disengage the PTO, lower all implements to the ground, place all control levers in their neutral positions, set the parking brake, stop the engine and remove the key.

3. If it is necessary to park on an incline, be sure to chock the wheels to prevent accidental rolling of the machine.
OPERATING TECHNIQUES

Differential Lock

**WARNING**

To avoid personal injury or death due to loss of steering control:
- Do not operate the tractor at high speed with differential lock engaged.
- Do not attempt to turn with the differential lock engaged.
- Be sure to release the differential lock before making a turn in field conditions.

If one of the rear wheels should slip, step on the differential lock pedal. Both wheels will turn together, then reduce slippage. Differential lock is maintained only while the pedal is depressed.

**IMPORTANT:**
- When using the differential lock, always slow the engine down.
- To prevent damage to power train, do not engage differential lock when one wheel is spinning and the other is completely stopped.
- If the differential lock cannot be released in the above manner, step lightly on the brake pedals alternately.

Operating the Tractor on a Road

**WARNING**

To avoid personal injury or death:
- To help assure straight line stops when driving at transport speeds, lock the brake pedals together. Uneven braking at road speeds could cause the tractor to roll-over.
- When traveling on road with 3-point hitch mounted implement attached, be sure to have sufficient front weight on the tractor to maintain steering ability. (See "BALLAST" section.)
- Towed equipment (without brake) must not exceed 1.5 times the tractor weight when traveling on roads or at high speeds.

Be sure SMV emblem and hazard light are clean and visible. If towed or rear-mounted equipment obstructs these safety devices, install SMV emblem and hazard light on equipment.

Consult your local KUBOTA dealer for further detail.
Operating on Slopes or Rough Terrain

**WARNING**

To avoid personal injury or death:

- Always back up when going up a steep slope. Driving forward could cause the tractor to tip over backward. Stay off hills and slopes too steep for safe operation.
- Avoid changing gears when climbing or descending a slope.
- If operating on a slope, never disengage shift levers to neutral. Doing so could cause loss of control.
- Do not drive the tractor close to the edges of ditches or banks which may collapse under the weight of the tractor. Especially when the ground is loose or wet.

1. Slow down for slopes, rough ground, and sharp turns, especially when transporting heavy, rear mounted equipment.
2. Before descending a slope, be sure that the range lever is in the low so that speed can be controlled without using brakes.

Transport the Tractor Safely

1. The tractor, if damaged, must be carried on a truck. Secure the tractor tightly with ropes.
2. Follow the instruction below when towing the tractor:
   - Otherwise, the tractor’s powertrain may get damaged.
   - Set the all shift levers to “NEUTRAL” position.
   - If possible, start engine and select 2WD, if creep speed is fitted ensure that it is disengaged.
   - Tow the tractor using its front hitch or drawbar.
   - Never tow faster than "10 km/h (6.2 mph)".

Directions for Use of Power Steering

1. Power steering is activated only while the engine is running. While the engine is stopped, the tractor functions in the same manner as tractors without power steering.
2. When the steering wheel is turned all the way to the stop, the relief valve is activated. Do not hold the steering wheel in this position for a long period of time.
3. Avoid turning the steering wheel while the tractor is stopped, or tires may wear out sooner.
4. The power steering mechanism makes the steering easier. Be careful when driving on a road at high speeds.

**Electrical Outlet**

An electrical outlet is supplied for use with implement and electrical equipment.

1. Accessory electrical outlet (DC 12V, MAX 120W)
2. Electrical outlet for work light (DC 12V, MAX 35W)
PTO OPERATION

**WARNING**
To avoid personal injury or death:
- Before operation, be sure to select the correct PTO lever (mid, mid/rear, rear).

**WARNING**
To avoid personal injury or death:
- Disengage PTO, stop engine, and allow all rotating components to come to a complete stop before connecting, disconnecting, adjusting, or cleaning any PTO driven equipment.

**PTO Select Lever**
The tractor has a 540 rpm rear PTO speed and a 2500 rpm mid-PTO speed.

- **Mid-PTO**
  To use Mid-PTO, shift the PTO select lever to Mid-PTO position and the PTO clutch lever to the "ON" position.

  **NOTE:**
  - The Mid-PTO is available for KUBOTA approved implements.

- **Mid-Rear PTO**
  To use mid and rear PTO at the same time, shift the PTO select lever to mid-rear PTO position and the PTO clutch lever to the "ON" position.

- **Rear PTO**
  To use rear PTO, shift the PTO select lever to rear PTO position and the PTO clutch lever to the "ON" position.

**Mid-PTO speed**

PTO Clutch Lever

1. The PTO clutch lever engages or disengages the PTO clutch which gives the PTO independent control.
2. Shift the lever to "ON" to engage the PTO clutch. Shift the lever to "OFF" to disengage the PTO clutch.

IMPORTANT:
- To avoid shock loads to the PTO, reduce engine throttle from high idle to low idle by pushing up on engine throttle when engaging the PTO, then open the throttle to the recommended engine rpm.
- To avoid damage to PTO clutch and implement, shift the PTO clutch lever slowly, when engaging the PTO clutch. Do not keep the PTO clutch lever halfway.
- To avoid damage of transmission, when PTO select lever is not smoothly shifted, slightly shift PTO clutch lever.
- To avoid damage of transmission, do not shift PTO select lever until the PTO has stopped completely.

NOTE:
- Tractor engine will not start if the PTO clutch lever is in the engaged "ON" position.
- When you stand up from the seat with the PTO clutch lever in the "ON" position, the engine will stop regardless of the position of the PTO select lever. This is because the tractor is equipped with Operator Presence Control (OPC) system.

Stationary PTO

To park the tractor and use the PTO system (for chipper or pump, for example), start the PTO system in the following steps.
1. Apply the parking brake and place blocks at the tires.
2. Make sure the shift levers are at NEUTRAL, and start the engine.
3. Set the PTO select lever to rear only position.
4. Set the PTO clutch lever to engage "ON".
5. Set the engine speed to provide recommended rear PTO speed.
6. Get off the tractor.

NOTE:
- If the PTO system is engaged and you stand up from the seat and release the parking brake, the engine stops automatically after standing up.
(1) Top link
(2) Top link holder
(3) Lifting rod (Left)
(4) Telescopic stabilizers
(5) Lower link
(6) Lifting rod (Right)
(7) Drawbar
3-POINT HITCH

1. Make preparations for attaching implement.

- Selecting the holes of lifting rods and lower links
  There are 2 holes in the lower links. For most operations the lifting rods should be attached to the (A) holes.

  ![Image of 3-Point Hitch](1AGAEFAP038D)

  (1) Lower links  holes:(A),(B)
  (2) Lifting rods

  NOTE:
  - The lifting rods may be attached to (B) hole for higher lifting height. (with reduced lifting force)

- Selecting the Top Link Mounting Holes
  Select the proper set of holes by referring to the "Hydraulic Control Unit Use Reference Chart" in "HYDRAULIC UNIT" section.

  ![Image of Top Link Mounting Holes](1AGAEFAP003E)

  (1) Mounting hole 1
  (2) Mounting hole 2

- Drawbar
  Remove the drawbar if a close mounted implement is being attached.

2. Attaching and detaching implements

- WARNING
  To avoid personal injury or death:
  - Be sure to stop the engine and remove the key.
  - Do not stand between tractor and implement unless parking brake is applied.
  - Before attaching or detaching implement, locate the tractor and implement on a firm, flat and level surface.
  - Whenever an implement or other attachment is connected to the tractor 3-point hitch, check full range of operation for interference, binding or PTO driveline separation.

- Lifting Rod (Right)
  Level a 3-point mounted implement from side to side by turning the adjusting handle to shorten or lengthen the adjustable lifting rod with the implement on the ground. After adjustment, tighten the lock nut securely.

  ![Image of Lifting Rod](1AGAEFAP038B)

  (1) Adjusting handle
  (2) Lock nut

- Top Link
  1. Adjust the angle of the implement to the desired position by shortening or lengthening the top link.
  2. The proper length of the top link varies according to the type of implement being used.
Telescopic Stabilizers
Adjust the telescopic stabilizers to control horizontal sway of the implement. Select the proper set of holes by referring to the "Hydraulic Control Unit Use Reference Chart" in "AUXILIARY HYDRAULICS" in "HYDRAULIC UNIT" section.
After aligning satisfactorily, insert the set-pin through any one of the 8 holes on the outer tube that align with one of the holes on the inner bar, both stabilizers will be locked. If the set-pin is inserted through the slot to engage one of the holes on the inner bar, a limited degree of sway will be permitted.

![Diagram of 3-Point Hitch & Drawbar components]

1. Outer tube
2. Inner bar
3. Set-pin
4. Hole
5. Slot

WARNING
To avoid personal injury or death:
- Never pull from the top link, the rear axle or any point above the drawbar. Doing so could cause the tractor to tip over rearward causing personal injury or death.

Adjusting Drawbar Length
When towing an implement, use of (B) hole in drawbar is recommended.
The acceptable drawbar load is provided in the "IMPLEMENT LIMITATIONS" section.

![Diagram of Drawbar components]

1. PTO Shaft cap
2. Drawbar
3. Drawbar pin

Hole: (A), (B)
HYDRAULIC UNIT

3-POINT HITCH CONTROL SYSTEM

**WARNING**
To avoid personal injury or death:
- Before using the 3-point hitch controls, ensure that no person or object is in the area of the implement or 3-point hitch. Do not stand on or near the implement or between the implement and tractor when operating the 3-point hitch controls.

**Position Control**
This will control the working depth of 3-point hitch mounted implement regardless of the amount of pull required.

![Position control lever diagram]

(1) Position control lever
(A) "FLOAT"
(B) "DOWN"
(C) "UP"

**IMPORTANT:**
- If the 3-point hitch can not be raised by setting the hydraulic control lever to the UP position after long term storage or when changing the transmission oil, turn steering wheel to the right and left several times to bleed air from the system.
- Do not operate until the engine is warmed up. If operation is attempted when the engine is still cold, the hydraulic system may be damaged.
- If noises are heard when implement is lifting after the hydraulic control lever has been activated, the hydraulic mechanism is not adjusted properly. Unless corrected, the unit will be damaged. Contact your KUBOTA Dealer for adjustment.

3-point Hitch Lowering Speed

**WARNING**
To avoid personal injury or death:
- Fast lowering speed may cause damage or injury. Lowering speed of implement should be adjusted to 2 or more seconds.

The lowering speed of the 3-point hitch can be controlled by adjusting the 3-point hitch lowering speed knob.
**AUXILIARY HYDRAULICS**

Hydraulic outlet (rear) is provided on the tractor.

**Hydraulic Block Type Outlet**

Hydraulic block type outlet is useful when adding hydraulically operated equipment such as front end loader, front blade, etc.

When an implement is attached

1. Remove the block cover.
2. Attach the block outlet cover. (option)

[Rear outlet]

Hydraulic outlets are provided on the tractor.

---

**DUAL REMOTE HYDRAULIC CONTROL SYSTEM**

The tractor is equipped with the double-acting 2-segment hydraulic control valve for the front loader.

To apply the hydraulic power take-off for general attachments, keep the following point in mind.

**Control Lever and Hydraulic Hose Connections**

Connect the control lever in its specified direction and the hydraulic hoses to their specified ports.

---

**NOTE:**

- If the implement control valve has a relief valve, the tank port flow from implement should be connected to the port located on the right hand side of transmission case.

---

IMPORTANT:
To avoid damage of the attachments:

- Do not connect attachments through the hydraulic motor to the [C] and [D] ports. If the control lever is moved to the Regeneration position (R1), the seals on the hydraulic motor will be damaged.
- This control valve is provided with the Regeneration position. When the [C] and [D] ports are used to take off hydraulic power for the hydraulic cylinder, be sure to connect the [C] port to the "Head-End" side port of the hydraulic cylinder.
- Make the following connections when using this valve to take off hydraulic power for the hydraulic cylinder.

<table>
<thead>
<tr>
<th>Colored Coupler</th>
<th>Hydraulic Cylinder port</th>
</tr>
</thead>
<tbody>
<tr>
<td>[B: Yellow], [C: Blue]</td>
<td>Head-End side</td>
</tr>
<tr>
<td>[A: White], [D: Red]</td>
<td>Rod-End side</td>
</tr>
</tbody>
</table>

**Loader / Remote Control Valve Lever**

1. Before moving the lever, make sure that the hydraulic hoses for attachments are connected.
2. Move the lever diagonally (a, b, c shown in the figure), and the first and second segments can be controlled simultaneously.

**Value Lock**

**WARNING**
To avoid injury or death from crushing:

- Do not utilize the valve lock for machine maintenance or repair.
- The valve lock is to prevent accidental actuation when implement is not in use or during transport.

The control valve is equipped with a valve lock feature. The control valve is locked in the "LOCK" position. The lock is not intended and will not prevent a leak down of the implement during the period of storage.

**NOTE:**

- Move the lever to the "FLOAT" position, and it will be held there by the detent mechanism. To use the valve as a floating valve with detents, connect the hydraulic hoses to ports [A] and [B].
- When taking off hydraulic power from port [D], the flow rate can be adjusted in 2 stages with the lever. The flow rate is high at position (R1) and low at position (R2). Move the lever to position (R1) or (R2) depending on the attachment in use.
### Hydraulic Control Unit Use Reference Chart

In order to handle the hydraulics properly, the operator must be familiar with the following. Though this information may not be applicable to all types of implements and soil conditions, it is useful for general conditions.

<table>
<thead>
<tr>
<th>Implement</th>
<th>Soil condition</th>
<th>Top link mounting holes</th>
<th>Position control lever</th>
<th>Gauge wheel</th>

</tbody>
</table>

Remarks:
- Insert the set-pin through the slot on the outer tube that align with one of the holes on the inner bar.
- Loose: For implements with gauge wheels, lower the implements to the ground.
- Position control lever:
  - YES: Telescopic stabilizer should be tight enough to prevent excessive implement movement when implement is in raised position. For implements with gauge wheels, lower the implements to the ground.
  - YES/NO: Insert the set-pin through the slot on the outer tube that align with one of the holes on the inner bar.
  - Loose: For implements with gauge wheels, lower the implements to the ground.
TIRES, WHEELS AND BALLAST

TIRES

⚠️ WARNING
To avoid personal injury or death:
• Do not attempt to mount a tire on a rim. This should be done by a qualified person with the proper equipment.
• Always maintain the correct tire pressure. Do not inflate tires above the recommended pressure shown in the operator's manual.

IMPORTANT:
• Do not use tires other than those approved by KUBOTA.

Inflation Pressure
Though the tire pressure is factory-set to the prescribed level, it naturally drops slowly over the course of time. Therefore, check it regularly and inflate as necessary.

<table>

⚠️ Dual Tires
Dual tires are not approved.

WHEEL ADJUSTMENT

⚠️ WARNING
To avoid personal injury or death:
• When working on slopes or when working with a trailer, set the wheel tread as wide as practical for maximum stability.
• Support tractor securely on stands before removing a wheel.
• Do not work under any hydraulically supported devices. They can settle, suddenly leak down, or be accidentally lowered. If necessary to work under tractor or any machine elements for servicing or adjustment, securely support them with stands or suitable blocking beforehand.
• Never operate tractor with a loose rim, wheel, or axle.
Front Wheels
Front tread width cannot be adjusted.

**IMPORTANT:**
- Do not turn front discs to obtain wider tread.
  In setting up the front wheels, make sure that the inflation valve stem of the tires face outward.
- When re-fitting or adjusting a wheel, tighten the bolts to the following torques then recheck after driving the tractor 200 m (200 yards) and 10 times of shuttle movement by 5 m (5 yards), and thereafter according to service interval. (See "MAINTENANCE" section.)

!WARNING
To avoid personal injury or death:
- Before jacking up the tractor, park it on a firm and level ground and chock the rear wheels.
- Fix the front axle to keep it from swinging.
- Select jacks that withstand the machine weight and set them up as shown below.

Rear Wheels
Rear tread width cannot be adjusted.

**IMPORTANT:**
- When re-fitting or adjusting a wheel, tighten the bolts to the following torques then recheck after driving the tractor 200 m (200 yards) and 10 times of shuttle movement by 5 m (5 yards), and thereafter according to service interval. (See "MAINTENANCE" section.)

[Wheels with beveled or tapered holes]
- Use the tapered side of lug nut.
[Wheels without beveled or tapered holes]

- Use the flat side of the lug nut. Make sure to apply the spring washer.

![Diagram](1AGAEBCAP155A)

(1) Lug nut
(2) Spring washer

**WARNING**

To avoid personal injury or death:
- Before jacking up the tractor, park it on a firm and level ground and chock the front wheels.
- Fix the front axle to keep it from swinging.
- Select jacks that withstand the machine weight and set them up as shown below.

BALLAST

WARNING
To avoid personal injury or death:
• Additional ballast will be needed for transporting heavy implements. When the implement is raised, drive slowly over rough ground, regardless of how much ballast is used.
• Do not fill the front wheels with liquid.

Front Ballast
Add weights if needed for stability and improving traction. Heavy pulling and heavy rear mounted implements tend to lift front wheels. Add enough ballast to maintain steering control and prevent tip over. Remove weight when no longer needed.

Front End Weights (option)
The front end weights can be attached to the bumper. See your implement operator’s manual for required number of weights or consult your local KUBOTA Dealer to use.

NOTE:
[For installation of up to 3 weights]
• Besides the weight, mounting bolt kit(s) are required for mounting the weight.

[For installation of up to 5 weights]
• Besides the weight, a front weight bracket and mounting bolt kit(s) are required for mounting the weight.

Rear Ballast
Add weight to rear wheels if needed to improve traction or for stability. The amount of rear ballast should be matched to job and the ballast should be removed when it is not needed. The weight should be added to the tractor in the form of liquid ballast.

Liquid Ballast in Rear Tires
Water and calcium chloride solution provides safe economical ballast. Used properly, it will not damage tires, tubes or rims. The addition of calcium chloride is recommended to prevent the water from freezing. Use of this method of weighting the wheels has the full approval of the tire companies. See your tire dealer for this service.

**IMPORTANT:**

- The jobs indicated by © must be done after the first 50 hours of operation.
- *1 Air cleaner should be cleaned more often in severe dusty conditions.
- *2 Every year or after 6 cleanings.
- *3 Replace only if necessary.
- *4 Consult your local KUBOTA Dealer for this service.
- *5 When the battery is used for less than 100 hours per year, check the fluid level annually.

- The items listed above (@ marked) are registered as emission related critical parts by KUBOTA in the U.S.EPA nonroad emission regulation. As the engine owner, you are responsible for the performance of the required maintenance on the engine according to the above instruction.

Please see the Warranty Statement in detail.

**NOTE:**

The product name of KUBOTA genuine UDT fluid may be different from that in the Operator’s Manual depending on countries or territories. Consult your local KUBOTA Dealer for further details.
For North American market

NOTE:
♦ Engine Oil:
  • Oil used in the engine should have an American Petroleum Institute (API) service classification and Proper SAE Engine Oil according to the ambient temperatures as shown above:
  • Refer to the following table for the suitable API classification engine oil according to the engine type (with internal EGR, external EGR or non-EGR) and the fuel.

<table>
<thead>
<tr>
<th>Fuel used</th>
<th>Engine oil classification (API classification)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Oil class of engines except external EGR</td>
</tr>
<tr>
<td>Ultra Low Sulfur Fuel [&lt;0.0015% (15 ppm)]</td>
<td>CF, CF-4, CG-4, CH-4 or CI-4</td>
</tr>
</tbody>
</table>

EGR: Exhaust Gas Re-circulation
• The CJ-4 engine oil is intended for DPF (Diesel Particulate Filter) type engines, and cannot be used on this tractor.

♦ Fuel:
  • Cetane number of 45 is minimum. Cetane number greater than 50 is preferred, especially for temperatures below -20 °C (-4 °F ) or elevations above 1500 m (5000 ft).
  • Diesel fuels specified to EN 590 or ASTM D975 are recommended.
  • N0.2-D is a distillate fuel of lower volatility for engines in industrial and heavy mobile service. (SAE J313 JUN87)

♦ Transmission Oil:
  *KUBOTA Super UDT-2: For an enhanced ownership experience, we highly recommend Super UDT-2 to be used instead of standard hydraulic/transmission fluid.
  Super UDT-2 is a proprietary KUBOTA formulation that delivers superior performance and protection in all operating conditions.
  Regular UDT is also permitted for use in this machine.
  • Indicated capacities of water and oil are manufacturer's estimate.
NOTE:
◆ Engine Oil:
  ● Oil used in the engine should have an American Petroleum Institute (API) service classification and Proper SAE Engine Oil according to the ambient temperatures as shown above:
  ● With the emission control now in effect, the CF-4 and CG-4 lubricating oils have been developed for use of a low-sulfur fuel on on-road vehicle engines. When an off-road vehicle engine runs on a high-sulfur fuel, it is advisable to employ the "CF or better" lubricating oil with a high Total Base Number (TBN of 10 minimum).
  ● Refer to the following table for the suitable API classification engine oil according to the engine type (with internal EGR, external EGR or non-EGR) and the fuel (low-sulfur or high-sulfur fuel).

<table>
<thead>
<tr>
<th>Fuel used</th>
<th>Engine oil classification (API classification)</th>
</tr>
</thead>
<tbody>
<tr>
<td>High Sulfur Fuel [≥ 0.05% (500 ppm)]</td>
<td>CF (If the &quot;CF-4, CG-4, CH-4 or CI-4&quot; lubricating oil is used with a high-sulfur fuel, change the lubricating oil at shorter intervals. (approximately half))</td>
</tr>
<tr>

◆ Fuel:
● Cetane number of 45 minimum. Cetane number greater than 50 is preferred, especially for temperatures below -20 °C or elevations above 1500 m.
● If diesel fuel with sulfur content greater than 0.5% (5000 ppm) sulfur content is used, reduce the service interval for engine oil and filter by 50%
● NEVER use diesel fuel with sulfur content greater than 0.05% (500 ppm) for EXTERNAL EGR type engine.
● DO NOT use diesel fuel with sulfur content greater than 1.0% (10000 ppm).
● Diesel fuels specified to EN 590 or ASTM D975 are recommended.
● No.2-D is a distillate fuel of lower volatility for engines in industrial and heavy mobile service. (SAE J313 JUN87)

◆ Transmission Oil:
The oil used to lubricate the transmission is also used as hydraulic fluid. To insure proper operation of the hydraulic system and to complete lubrication of the transmission, it is important that a multi-grade transmission fluid is used in this system. We recommend the use of KUBOTA UDT or SUPER UDT fluid for optimum protection and performance. (Consult your local KUBOTA Dealer for further detail.)
Do not mix different brands together.
● Indicated capacities of water and oil are manufacturer's estimate.
HOW TO OPEN THE HOOD

**WARNING**
To avoid personal injury or death from contact with moving parts;
- Never open the hood or engine side cover while the engine is running.
- Do not touch muffler or exhaust pipes while they are hot; Severe burns could result.
- Support hood with other hand while unlocking support rod.

**Hood**

**Open the hood**
1. Slightly pull up the hood to unlock it with pulling the release lever.

2. Open the hood by holding its bottom with both hands.

**Close the hood**
1. To close the hood, hold the hood and release the support rod.

2. In closing the hood, use both hands again.
### Engine Side Cover

**Removing the side cover**

1. Lift up the engine side cover and free the upper and lower projections.
2. Pull the cover toward "B" and detach the notch.

- **Projection**
- **Hole**
- **Notch**

**Attaching the side cover**

To attach the cover, take the reverse order.

### Daily Check

#### WARNING

To avoid personal injury or death:

- Do not smoke while refueling.
- Be sure to stop the engine before refueling.

1. Turn the key switch to "ON", check the amount of fuel by fuel gauge.
2. Fill fuel tank when fuel gauge shows 1/4 or less fuel in tank.
3. Use grade No.2-Diesel fuel at temperatures above -10 °C (14 °F).
   Use grade No.1-Diesel fuel at temperatures below -10 °C (14 °F).

#### WARNING

To avoid personal injury or death:

- Park the machine on firm and level ground.
- Set the parking brake.
- Lower the implement to the ground.
- All residual pressure of the hydraulic system released.
- Stop the engine and remove the key.

### Walk Around Inspection

Look around and under the tractor for such items as loose bolts, trash build-up, oil or coolant leaks, broken or worn parts.

### Checking and Refueling

#### WARNING

To avoid personal injury or death:

- Do not smoke while refueling.
- Be sure to stop the engine before refueling.

1. Turn the key switch to "ON", check the amount of fuel by fuel gauge.
2. Fill fuel tank when fuel gauge shows 1/4 or less fuel in tank.
3. Use grade No.2-Diesel fuel at temperatures above -10 °C (14 °F).
   Use grade No.1-Diesel fuel at temperatures below -10 °C (14 °F).

**Fuel tank capacity**

| Fuel tank capacity | 23 L (6.1 U.S.gals.) |
IMPORTANT:
- Do not permit dirt or trash to get into the fuel system.
- Be careful not to let the fuel tank become empty, otherwise air will enter the fuel system, necessitating bleeding before next engine start.
- Be careful not to spill during refueling. If you should spill, wipe it off at once, or it may cause a fire.
- To prevent condensation (water) accumulation in the fuel tank, fill the tank before parking overnight.

**Checking Engine Oil Level**

**WARNING**
To avoid personal injury or death:
- Be sure to stop the engine before checking the oil level.

1. Park the machine on a flat surface.
2. Check engine oil before starting the engine or 5 minutes or more after the engine has stopped.
3. To check the oil level, draw out the dipstick, wipe it clean, replace it, and draw it out again. Check to see that the oil level lies within the crosshatched area. If the level is too low, add new oil to the prescribed level at the oil inlet.
(See "LUBRICANTS" in "MAINTENANCE" section.)

**Checking Transmission Fluid Level**

1. Park the machine on a flat surface, lower the implement and shut off engine.
2. To check the oil level, draw out the dipstick, wipe it clean, replace it, and draw it out again. Check to see that the oil level lies within the crosshatched area. If the level is too low, add new oil to the prescribed level at the oil inlet.
(See "LUBRICANTS" in "MAINTENANCE" section.)

**IMPORTANT:**
- If oil level is low, do not run engine.

**IMPORTANT:**
- When using an oil of different maker or viscosity from the previous one, remove all of the old oil.
  Never mix two different types of oil.
- If oil level is low, do not run engine.
**Checking Coolant Level**

**WARNING**
To avoid personal injury or death:
- Do not remove radiator cap while coolant is hot. When cool, slowly rotate cap to the first stop and allow sufficient time for excess pressure to escape before removing the cap completely.

1. Check to see that the coolant level is between the "FULL" and "LOW" marks of recovery tank.
2. When the coolant level drops due to evaporation, add soft water only up to the full level.
   In case of leakage, add anti-freeze and soft water in the specified mixing ratio up to the full level.
   (See "Flushing Cooling System and Changing Coolant" in "EVERY 2 YEARS" in "PERIODIC SERVICE" section.)

**Cleaning Evacuator Valve**
Open the evacuator valve to get rid of large particles of dust and dirt.

**Cleaning Grill and Radiator Screen**

**WARNING**
To avoid personal injury or death:
- Be sure to stop the engine and remove the key before removing the screen.

1. Check front grill and side screens to be sure they are clean of debris.
2. Detach the screen and remove all foreign material and clean the front of radiator completely.

**IMPORTANT:**
- If the radiator cap has to be removed, follow the caution above and securely retighten the cap.
- Use clean, fresh soft water and anti-freeze to fill the recovery tank.
- If water should leak, consult your local KUBOTA Dealer.

**IMPORTANT:**
- Grill and screen must be clean from debris to prevent engine from overheating and to allow good air intake for the air cleaner.
Checking Brake Pedal
1. Inspect the brake pedals for free travel, and smooth operation.
2. Adjust if incorrect measurement is found:
   (See "Adjusting Brake Pedal" in "EVERY 100 HOURS"
in "PERIODIC SERVICE" section.)

Checking Gauges, Meter and Easy Checker(TM)
1. Inspect the instrument panel for broken gauge(s),
   meter(s) and Easy Checker(TM).
2. Replace if broken.

Checking Head Light, Hazard Light etc.
1. Inspect the lights for broken bulbs and lenses.
2. Replace if broken.

Checking Seat Belt and ROPS
1. Always check condition of seat belt and ROPS
   attaching hardware before operating tractor.
2. Replace if damaged.

Checking and Cleaning of Electrical
Wiring and Battery Cables

WARNING
To avoid personal injury or death:
• A loosened terminal or connector, or damaged wire may affect the performance of electrical components or cause short circuits. Leakage of electricity could result in a fire hazard, a dead battery or damage to electrical components.
• Replace damaged wires or connections promptly.
• If a fuse blows soon after replacement, DO NOT USE A LARGER THAN RECOMMENDED FUSE OR BYPASS THE FUSE SYSTEM.
• Many wiring connections are protected by waterproof plugs, plug and unplug these connections carefully and make sure they are sealed correctly after assembly.
• Accumulation of dust, chaff or spilled fuel deposits around the battery, electrical wiring, engine or exhaust system are a fire hazard. CLEAN THESE AREAS BEFORE STARTING WORK.
To avoid premature electrical malfunctions DO NOT APPLY high pressure water directly to battery, wiring, connectors, electrical components or instrument panel.

Inspect the following Regularly:
1. Check wiring for chafed or cracked insulation.
2. Check wiring harness clamps. Replace if necessary.
3. Check connectors and terminals for looseness, contamination or overheated (discolored) connections.
4. Check instrument panel for correct operation of switches and gauges.
Consult your Kubota Dealer regarding maintenance, diagnosis and repair.

Checking Movable Parts
If any of the movable parts, such as levers and pedals, is not smoothly moved because of rust or sticky material, do not attempt to force it into motion.
In the above case, remove the rust or the sticky material, and apply oil or grease on the relevant spot.
Otherwise, the machine may get damaged.
EVERY 50 HOURS

Lubricating Grease Fittings
Apply a small amount of multipurpose grease to the following points every 50 hours:
If you operated the machine in extremely wet and muddy conditions, lubricate grease fittings more often.

Checking Engine Start System

WARNING
To avoid personal injury or death:
• Do not allow anyone near the tractor while testing.
• If the tractor does not pass the test do not operate the tractor.
• Detach an implement before testing.

◆ Preparation before testing.
1. Sit on operator’s seat.
2. Set the parking brake and stop the engine.
3. Shift the range gear shift lever to "NEUTRAL" position.
4. Place the speed control pedal in "NEUTRAL" position.
5. Shift the PTO clutch lever to "OFF" position.

◆ Test: Switch for the speed control pedal.
1. Depress the speed control pedal.
2. Turn the key to "START" position.
3. The engine must not crank.
4. If it cranks, consult your local KUBOTA Dealer for this service.

◆ Test: Switch for the PTO clutch lever.
1. Place the speed control pedal in "NEUTRAL" position.
2. Shift the PTO clutch lever to "ON" position.
3. Turn the key to "START" position.
4. The engine must not crank.
5. If it cranks, consult your local KUBOTA Dealer for this service.

◆ Test: Switches for the operator’s seat and the PTO clutch lever.
1. Sit on the operator’s seat.
2. Start the engine.
3. Engage the PTO clutch lever.
4. Stand up. (Do not get off the machine.)
5. The engine must shut off after approximately 1 second.
6. If it does not stop, consult your local KUBOTA Dealer for this service.
EVERY 100 HOURS

■ Checking Battery Condition

DANGER
To avoid the possibility of battery explosion:
For the refillable type battery, follow the instructions below.
• Do not use or charge the refillable type battery if the fluid level is below the LOWER (lower limit level) mark. Otherwise, the battery component parts may prematurely deteriorate, which may shorten the battery’s service life or cause an explosion. Check the fluid level regularly and add distilled water as required so that the fluid level is between the UPPER and LOWER levels.

WARNING
To avoid personal injury or death:
• Never remove the battery cap while the engine is running.
• Keep electrolyte away from eyes, hands and clothes. If you are spattered with it, wash it away completely with water immediately and get medical attention.
• Keep open sparks and flames away from the battery at all times. Hydrogen gas mixed with oxygen becomes very explosive.
• Wear eye protection and rubber gloves when working around battery.

The factory-installed battery is of non-refillable type. If the indicator turns white, do not charge the battery but replace it with new one.

Mishandling the battery shortens the service life and adds to maintenance costs.
The original battery is maintenance free, but needs some servicing.
If the battery is weak, the engine will be difficult to start and the lights will be dim. It is important to check the battery periodically.

■ Checking Wheel Bolt Torque

WARNING
To avoid personal injury or death:
• Never operate tractor with a loose rim, wheel, or axle.
• Any time bolts and nuts are loosened, retighten to specified torque.
• Check all bolts and nuts frequently and keep them tight.

Check wheel bolts and nuts regularly especially when new. If they are loose, tighten them as follows.

(1) 79 to 92 N·m (8.1 to 9.4 kgf-m, 58.3 to 67.9 ft-lbs.)
(2) 145 to 150 N·m (14.8 to 15.3 kgf-m, 107.0 to 110.6 ft-lbs.)

 Beware of your surroundings and never operate the tractor with a rim, wheel, or axle that is loose.
How to read the indicator
Check the battery condition by reading the indicator.

<table>
<thead>
<tr>
<th>State of indicator display</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Green</td>
<td>Specific gravity of electrolyte and quality of electrolyte are both in good condition.</td>
</tr>
<tr>
<td>Black</td>
<td>Needs charging battery.</td>
</tr>
<tr>
<td>White</td>
<td>Needs replacing battery.</td>
</tr>
</tbody>
</table>

Battery Charging

**WARNING**
To avoid personal injury or death:
- When the battery is being activated, hydrogen and oxygen gases in the battery are extremely explosive. Keep open sparks and flames away from the battery at all times, especially when charging the battery.
- When charging the battery, ensure the vent caps are securely in place. (if equipped)
- When disconnecting the cable from the battery, start with the negative terminal first. When connecting the cable to the battery, start with the positive terminal first.
- Never check battery charge by placing a metal object across the posts. Use a voltmeter or hydrometer.

1. To slow charge the battery, connect the battery positive terminal to the charger positive terminal and the negative to the negative, then recharge in the standard fashion.
2. A boost charge is only for emergencies. It will partially charge the battery at a high rate and in a short time. When using a boost-charged battery, it is necessary to recharge the battery as early as possible. Failure to do this will shorten the battery's service life.
3. The battery is charged if the indicator display turns green from black.
4. When exchanging an old battery for a new one, use battery of equal specification shown in table 1.

**[TABLE 1]**

<table>
<thead>
<tr>
<th>Battery Type</th>
<th>Volts (V)</th>
<th>Capacity at 5 hr (Ah)</th>

<td>4.5</td>
</tr>
</tbody>
</table>

Direction for Storage
1. When storing the tractor for a long period, remove the battery from tractor, adjust the electrolyte to the proper level and store in a dry place out of direct sunlight.
2. The battery self-discharges while it is stored. Recharge it once every 3 months in hot seasons and once every 6 months in cold seasons.
Cleaning Air Cleaner Primary Element

**WARNING**
To avoid personal injury or death:
- Be sure to stop the engine and remove the key before cleaning air filter element.

1. Remove the air cleaner cover and primary element.
2. Clean the primary element:
   1. When dry dust adheres to the element, blow compressed air from the inside, turning the element. Pressure of compressed air must be under 205 kPa (2.1 kgf/cm², 30 psi).
   2. When carbon or oil adheres to the element, soak the element in detergent for 15 minutes then wash it several times in water, rinse with clean water and dry it naturally. After element is fully dried, inspect inside of the element with a light and check if it is damaged or not.
3. Replace air cleaner primary element:
   Once yearly or after every sixth cleaning, whichever comes first.

**NOTE:**
- Check to see if the evacuator valve is blocked with dust.

Evacuator Valve
Open the evacuator valve once a week under ordinary conditions - or daily when used in a dusty place - to get rid of large particles of dust and dirt.

Cleaning Fuel Filter

**WARNING**
To avoid personal injury or death:
- Stop the engine and remove the key before checking fuel lines and fuel filter.
- Check the fuel lines periodically. The fuel lines are subject to wear and aging. Fuel may leak out onto the running engine, causing a fire.
- Protect your hands when using kerosene to clean components.

This job should not be done in the field, but in a clean place.
1. Loosen and remove the filter bowl, and rinse the inside with kerosene.
2. Take out the element and dip it in the kerosene to rinse.
3. After cleaning, reassemble the fuel filter, keeping out dust and dirt.
4. Bleed the fuel system.
   (See "SERVICE AS REQUIRED" in "PERIODIC SERVICE" section.)

**IMPORTANT:**
- When the fuel filter bowl has been removed, fuel stops flowing from the fuel tank. If the fuel tank is almost full, however, the fuel will flow back from the fuel return pipe to the fuel filter. Before checking, make sure the fuel tank is less than half-full.
**Adjusting Fan Belt Tension**

**WARNING**
To avoid personal injury or death:
- Be sure to stop the engine before checking belt tension.

| Proper fan belt tension | A deflection of between 7 to 9 mm (0.28 to 0.35 in.) when the belt is pressed in the middle of the span. |

1. Stop the engine and remove the key.
2. Apply moderate thumb pressure to belt between pulleys.
3. If tension is incorrect, loosen the alternator mounting bolts and, using a lever placed between the alternator and the engine block, pull the alternator out until the deflection of the belt falls within acceptable limits.
4. Replace fan belt if it is damaged.
--- Adjusting Brake Pedal ---

**WARNING**
To avoid personal injury or death:
- Stop the engine and chock the wheels before checking brake pedal.

<table>
<thead>
<tr>
<th>Proper brake pedal free travel</th>
<th>30 to 40 mm on the pedal</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Keep the free travel in the right and left brake pedals equal.</td>
</tr>
</tbody>
</table>

1. Release the parking brake.
2. Slightly depress the brake pedals and measure free travel at the top of pedal stroke.
3. If adjustment is needed, loosen the lock nut and turn the turnbuckle to adjust the rod length within acceptable limits.
4. Retighten the lock nut.

--- Checking Fuel Line ---

1. Check to see that all lines and hose clamps are tight and not damaged.
2. If hoses and clamps are found worn or damaged, replace or repair them at once.

**NOTE:**
- If the fuel line is removed, be sure to properly bleed the fuel system.
  (See "Bleeding Fuel System" in "SERVICE AS REQUIRED" in "PERIODIC SERVICE" section.)

■ Replacing Engine Oil Filter

**WARNING**
To avoid personal injury or death:
- Be sure to stop the engine before changing the oil filter cartridge.
- Allow engine to cool down sufficiently, oil can be hot and can burn.

1. Remove the oil filter.
2. Put a film of clean engine oil on the rubber seal of the new filter.
3. Tighten the filter quickly until it contacts the mounting surface.
   Tighten filter by hand an additional 1/2 turn only.
4. After the new filter has been replaced, the engine oil normally decreases a little. Make sure that the engine oil does not leak through the seal and be sure to check the oil level on the dipstick. Then, replenish the engine oil up to the prescribed level.

**IMPORTANT:**
- To prevent serious damage to the engine, use only a KUBOTA genuine filter.

■ Changing Engine Oil

**WARNING**
To avoid personal injury or death:
- Be sure to stop the engine before changing the oil.
- Allow engine to cool down sufficiently, oil can be hot and can burn.

1. To drain the used oil, remove the drain plug at the bottom of the engine and drain the oil completely into the oil pan.
   All the used oil can be drained out easily when the engine is still warm.
2. After draining reinstall the drain plug.
3. Fill with the new oil up to the upper line on the dipstick.
   (See "LUBRICANTS" in "MAINTENANCE" section.)

| Oil capacity with filter | 3.1 L (3.3 U.S.qts.) |

(1) Engine oil filter

(1) Oil inlet (A) Oil level is acceptable within this range
(2) Dipstick

(1) Drain plug (both sides)
Revising Transmission Oil Filter [HST]

**WARNING**
To avoid personal injury or death:
- Be sure to stop the engine before changing the oil filter cartridge.
- Allow engine to cool down sufficiently, oil can be hot and can burn.

1. Place the oil pan underneath the transmission oil filter and remove the filter. Do not remove the hydraulic oil filter. Otherwise, the oil comes out.

2. Put a film of clean transmission oil on the rubber seal of the new filter.

3. Quickly tighten the filter until it contacts the mounting surface, then, with a filter wrench, tighten it an additional 1 turn only.

4. After the new filter has been replaced, fill the transmission oil up to the upper limit on the dipstick.

5. After running the engine for a few minutes, stop the engine and check the oil level again, add oil to the prescribed level.

6. Make sure that the transmission fluid doesn't leak past the seal on the filter.

**IMPORTANT:**
- To prevent serious damage to the hydraulic system, use only a KUBOTA genuine filter.
- Do not operate the tractor immediately after changing the transmission fluid. Run the engine at medium speed for a few minutes to prevent damage to the transmission.
Checking Radiator Hose and Clamp

**WARNING**
To avoid personal injury or death:
- Be sure to stop the engine and remove the key before checking radiator hose and clamp.
- Allow engine and coolant to cool down sufficiently before checking.

Check to see if radiator hoses are properly fixed every 200 hours of operation or 6 months, whichever comes first.

1. If hose clamps are loose or water leaks, tighten bands securely.
2. Replace hoses and tighten hose clamps securely, if radiator hoses are swollen, hardened or cracked.

Replace hoses and hose clamps every 2 years or earlier if checked and found that hoses are swollen, hardened or cracked.

Checking Intake Air Line

1. Check to see that hoses and hose clamps are tight and not damaged.
2. If hoses and clamps are found worn or damaged, replace or repair them at once.

**Precaution at Overheating**
Take the following actions in the event the coolant temperature is nearly or more than the boiling point, what is called “Overheating”

1. Park the tractor in a safe place and keep the engine unloaded idling.
2. Don’t stop the engine suddenly, but stop it after about 5 minutes of unloaded idling.
3. Keep yourself well away from the machine for further 10 minutes or while the steam blows out.
4. Check that there are no dangers such as burns. Get rid of the causes of overheating according to the manual, see "TROUBLESHOOTING" section, and then, start again the engine.
**Adjusting Toe-in**
1. Park tractor on a flat place.
2. Turn steering wheel so front wheels are in the straight ahead position.
3. Lower the implement, lock the park brake and stop the engine.
4. Measure distance between tire beads at front of tire, hub height.
5. Measure distance between tire beads at rear of tire, hub height.
6. Front distance should be 0 to 10 mm (0 to 3/8 in.) less than rear distance. If not, adjust tie rod length.

**Adjusting procedures**
1. Loosen the tie-rod nut.
2. Turn the tie-rod joint to adjust the rod length until the proper toe-in measurement is obtained.
3. Retighten the tie-rod nut.

---

**EVERY 400 HOURS**

**Changing Transmission Fluid**

**WARNING**
To avoid personal injury or death:
- Allow engine to cool down sufficiently, oil can be hot and can burn.

1. To drain the used oil, remove the drain plug at the bottom of the transmission case and drain the oil completely into the oil pan.
2. After draining reinstall the drain plug.
3. Fill with new KUBOTA SUPER UDT fluid up to the upper limit on the dipstick. (See "LUBRICANTS" in "MAINTENANCE" section and "DAILY CHECK" in "PERIODIC SERVICE" section)
4. After running the engine for a few minutes, stop it and check the oil level again; add oil to prescribed level.
5. Properly dispose of used oil.

<table>
<thead>
<tr>

</tr>
</thead>
</table>

---

(A) Wheel - to - wheel distance at rear
(B) Wheel - to - wheel distance at front
(C) "FRONT"

(1) Tie-rod nut
(2) Tie-rod joint

(A) Oil level is acceptable within this range
(1) Oil inlet
(2) Dipstick

(1) Drain plug
(2) Drain plug (Both sides)
IMPORTANT:
- If the 3-point hitch cannot be raised by setting the hydraulic control lever to the UP position after long term storage or when changing the transmission oil, turn steering wheel to the right and left several times to bleed air from the system.
- Do not operate the tractor immediately after changing the transmission fluid.

Replacing Hydraulic Oil Filter

**WARNING**
To avoid personal injury or death:
- Be sure to stop the engine before changing the oil filter cartridge.
- Allow engine to cool down sufficiently, oil can be hot and can burn.

1. Remove the drain plugs at the bottom of the transmission case and drain the oil completely into the oil pan.
2. After draining reinstall the drain plugs.

3. Remove the oil filter

4. Put a film of clean transmission oil on the rubber seal of the new filter.
5. Quickly tighten the filter until it contacts the mounting surface, then tighten it by hand an additional 1/2 turn only.
6. After the new filter has been replaced, fill the transmission oil up to the upper limit on the dipstick.
7. After running the engine for a few minutes, stop the engine and check the oil level again, add oil to the prescribed level.
8. Make sure that the transmission fluid doesn’t leak past the seal on the filter.

**IMPORTANT:**
- To prevent serious damage to the hydraulic system, use only a KUBOTA genuine filter.

---

**Adjusting Front Axle Pivot [4WD]**

**WARNING**
To avoid personal injury or death:
- Park the tractor on a flat place.
- Lower the implement, lock the parking brake and stop the engine.

If the front axle pivot pin adjustment is not correct, front wheel vibration can occur causing vibration in the steering wheel.

**Adjusting procedure**
Loosen the lock nut, and tighten the adjusting screw so that the oscillating load is 50 to 100 N (5.1 to 10.2 kgf, 11.2 to 22.5 lbf). (If the adjusting screw is tightened, loosened and retightened, apply liquid gasket to its tip.) Retighten the lock nut.
Consult your local KUBOTA Dealer for further details.

---

**Replacing Fuel Filter Element**
(See "Cleaning Fuel Filter" in "EVERY 100 HOURS" in "PERIODIC SERVICE" section.)
**Changing Front Axle Case Oil**

1. Park the tractor on a firm, flat and level surface.
2. To drain the used oil, remove the right and left drain plugs and filling plug at the front axle case and drain the oil completely into the oil pan.
3. After draining, reinstall the drain plugs.
4. Fill with new oil up to the upper notch on the dipstick. (See "LUBRICANTS" in "MAINTENANCE" section)

**IMPORTANT:**
- After 10 minutes, check the oil level again; add oil to prescribed level.
5. After filling, reinstall the filling plug.
6. Properly dispose of used oil.

| Oil capacity | 3.5 L (3.7 U.S.qts.) |

**EVERY 800 HOURS**

**Adjusting Engine Valve Clearance**
Consult your local KUBOTA Dealer for this service.

**EVERY 1 500 HOURS**

**Checking Fuel Injection Nozzle Injection Pressure**
Consult your local KUBOTA Dealer for this service.

**EVERY 3 000 HOURS**

**EVERY 1 YEAR**

**Replacing Air Cleaner Primary Element and Secondary Element**
(See "Cleaning Air Cleaner Primary Element" in "EVERY 100 HOURS" in "PERIODIC SERVICE" section.)

**IMPORTANT:**
- To prevent serious damage to the engine, use only a KUBOTA genuine filter.

**EVERY 2 YEARS**

**Flushing Cooling System and Changing Coolant**

**WARNING**
To avoid personal injury or death:
- Do not remove radiator cap while coolant is hot. When cool, slowly rotate cap to the first stop and allow sufficient time for excess pressure to escape before removing the cap completely.

1. Stop the engine, remove the key and let it cool down.
2. To drain the coolant, disconnect the radiator hose (engine side), and remove the radiator cap. The radiator cap must be removed to completely drain the coolant.
3. After all coolant is drained, reconnect the radiator hose.
4. Fill with clean soft water and cooling system cleaner.
5. Follow directions of the cleaner instruction.
6. After flushing, fill with clean soft water and anti-freeze until the coolant level is just below the radiator cap. Install the radiator cap securely.
7. Fill with coolant up to the "FULL" mark of recovery tank.
8. Start and operate the engine for few minutes.
9. Stop the engine, remove the key and let cool.
10. Check coolant level of recovery tank and add coolant if necessary.
11. Properly dispose of used coolant.

| Coolant capacity (with recovery tank) | 3.8 L (4.0 U.S.gals.) |
### Anti-Freeze

**WARNING**

To avoid personal injury or death:
- When using antifreeze, put on some protection such as rubber gloves (Antifreeze contains poison.).
- If it is swallowed, seek immediate medical help. Do NOT make a person throw up unless told to do so by poison control or a health care professional. Use standard first aid and CPR for signs of shock or cardiac arrest. Call your local Poison Control Center or your local emergency number for further assistance.
- When antifreeze comes in contact with the skin or clothing, wash it off immediately.
- Do not mix different types of Antifreeze. The mixture can produce chemical reaction causing harmful substances.
- Antifreeze is extremely flammable and explosive under certain conditions. Keep fire and children away from antifreeze.
- When draining fluids from the engine, place some container underneath the engine body.
- Do not pour waste onto the grounds, down drain, or into any water source.
- Also, observe the relevant environmental protection regulations when disposing of antifreeze.

Always use a 50/50 mix of long-life coolant and clean soft water in KUBOTA engines.

Consult your local KUBOTA Dealer concerning coolant for extreme conditions.

1. Long-life coolant (hereafter LLC) comes in several types. Use ethylene glycol (EG) type for this engine.
2. Before employing LLC-mixed cooling water, fill the radiator with fresh water and empty it again. Repeat this procedure 2 or 3 times to clean up the inside.
3. Mixing the LLC Premix 50% LLC with 50% clean soft water. When mixing, stir it up well, and then fill into the radiator.
4. The procedure for the mixing of water and antifreeze differs according to the make of the antifreeze and the ambient temperature. Refer to SAE J1034 standard, more specifically also to SAE J814c.

<td>-37</td>
<td>-34</td>
</tr>
</tbody>
</table>

* At 1.013 x 10^5Pa (760mmHg) pressure (atmospheric). A higher boiling point is obtained by using a radiator pressure cap which permits the development of pressure within the cooling system.
5. Adding the LLC
   (1) Add only water if the mixture reduces in amount by evaporation.
   (2) If there is a mixture leak, add the LLC of the same manufacturer and type in the same mixture percentage.
   * Never add any long-life coolant of different manufacturer. (Different brands may have different additive components, and the engine may fail to perform as specified.)

6. When the LLC is mixed, do not employ any radiator cleaning agent. The LLC contains anticorrosive agent. If mixed with the cleaning agent, sludge may build up, adversely affecting the engine parts.

7. Kubota's genuine long-life coolant has a service life of 2 years. Be sure to change the coolant every 2 years.

NOTE:
* The above data represent industry standards that necessitate a minimum glycol content in the concentrated antifreeze.

**Replacing Radiator Hose (Water pipes)**
Replace the hoses and clamps.
(See "Checking Radiator Hose and Clamp" in "EVERY 200 HOURS" in "PERIODIC SERVICE" section.)

**Replacing Fuel Hose**
Consult your local KUBOTA Dealer for this service.

**Replacing Intake Air Line**
Consult your local KUBOTA Dealer for this service.

---

**SERVICE AS REQUIRED**

- **Bleeding Fuel System**
Air must be removed:
1. When the fuel filter or lines are removed.
2. When the tank is completely empty.
3. After the tractor has not been used for a long period of time.

- **Bleeding procedure is as follows:**
  1. Fill the fuel tank with fuel.
  2. Start the engine and run for about 30 seconds, and then stop the engine.

- **Draining Clutch Housing Water**
The tractor is equipped with a drain plug under the clutch housing.
After operating in rain, snow or tractor has been washed, water may get into the clutch housing.
Remove the drain plug and drain the water, then install the plug again.

---

(1) Water drain plug
Replacing Fuse
The tractor electrical system is protected from potential damage by fuses. A blown fuse indicates that there is an overload or short somewhere in the electrical system. If any of the fuses should blow, replace with a new one of the same capacity.

**IMPORTANT:**
- Before replacing a blown fuse, determine why the fuse blew and make any necessary repairs. Failure to follow this procedure may result in serious damage to the tractor electrical system. Refer to the "TROUBLESHOOTING" section of this manual or your local KUBOTA Dealer for specific information dealing with electrical problems.

WARNING

To avoid personal injury or death:
• Do not clean the machine while the engine is running.
• To avoid the danger of exhaust fume poisoning, do not operate the engine in a closed building without proper ventilation.
• When storing, remove the key from the key switch to avoid unauthorized persons from operating the tractor and getting injured.

TRACTOR STORAGE

If you intend to store your tractor for an extended period of time, follow the procedures outlined below. These procedures will insure that the tractor is ready to operate with minimum preparation when it is removed from storage.

1. Check the bolts and nuts for looseness, and tighten if necessary.
2. Apply grease to tractor areas where bare metal will rust also to pivot areas.
3. Detach the weights from the tractor body.
4. Inflate the tires to a pressure a little higher than usual.
5. Change the engine oil and run the engine to circulate oil throughout the engine block and internal moving parts for about 5 minutes.
6. With all implements lowered to the ground, coat any exposed hydraulic cylinder piston rods with grease.
7. Remove the battery from the tractor. Store the battery following the battery storage procedures. (See "Battery" in "EVERY 100 HOURS" in "PERIODIC SERVICE" section.)
8. Keep the tractor in a dry place where the tractor is sheltered from the elements. Cover the tractor.
9. Store the tractor indoors in a dry area that is protected from sunlight and excessive heat. If the tractor must be stored outdoors, cover it with a waterproof tarpaulin. Jack the tractor up and place blocks under the front and rear axles so that all 4 tires are off the ground. Keep the tires out of direct sunlight and extreme heat.

IMPORTANT:
• When washing the tractor, be sure to stop the engine. Allow sufficient time for the engine to cool before washing.
• Cover the tractor after the muffler and the engine have cooled down.

REMOVING THE TRACTOR FROM STORAGE

1. Check the tire air pressure and inflate the tires if they are low.
2. Jack the tractor up and remove the support blocks from under the front and rear axles.
3. Install the battery. Before installing the battery, be sure it is fully charged.
4. Check the fan belt tension.
5. Check all fluid levels (engine oil, transmission/hydraulic oil, engine coolant and any attached implements).
6. Start the engine. Observe all gauges. If all gauges are functioning properly and reading normal, move the tractor outside. Once outside, park the tractor and let the engine idle for at least 5 minutes. Shut the engine off and walk around tractor and make a visual inspection looking for evidence of oil or water leaks.
7. With the engine fully warmed up, release the parking brake and test the brakes for proper adjustment as you move forward. Adjust the brakes as necessary.
# ENGINE TROUBLESHOOTING

If something is wrong with the engine, refer to the table below for the cause and its corrective measure.

<table>
<thead>
<tr>
<th>Trouble</th>
<th>Cause</th>
<th>Countermeasure</th>
</tr>
</thead>
<tbody>
<tr>
<td>Engine is difficult to start or won’t start.</td>
<td>• No fuel flow.</td>
<td>• Check the fuel tank and the fuel filter. Replace filter if necessary.</td>
</tr>
</tbody>
</table>
| | • Air or water is in the fuel system. | • Check to see if the fuel line coupler bolt and nut are tight.  
• Bleed the fuel system.  
(See "Bleeding Fuel System" in "SERVICE AS REQUIRED" in "PERIODIC SERVICE" section.)  
• Remove water from the system and replace the fuel filter. |
| | • In winter, oil viscosity increases, and engine revolution is slow. | • Use oils of different viscosities, depending on ambient temperatures.  
• Use engine block heater. (Option) |
| | • Battery becomes weak and the engine does not turn over quick enough. | • Clean battery cables and terminals.  
• Charge the battery.  
• In cold weather, always remove the battery from the engine, charge and store it indoors. Install it on the tractor only when the tractor is going to be used. |
| Insufficient engine power. | • Insufficient or dirty fuel.  
• The air cleaner is clogged. | • Check the fuel system.  
• Clean or replace the element. |
| Engine stops suddenly. | • Insufficient fuel. | • Refuel.  
• Bleed the fuel system if necessary. |
| Exhaust fumes are colored. | Black | • Fuel quality is poor.  
• Too much oil.  
• The air cleaner is clogged. | • Change the fuel and fuel filter.  
• Check the proper amount of oil.  
• Clean or replace the element. |
| | Blue white | • The inside of exhaust muffler is dumped with fuel.  
• Injection nozzle trouble.  
• Fuel quality is poor. | • Heat the muffler by applying load to the engine.  
• Check the injection nozzle.  
• Change the fuel and fuel filter. |
| Engine overheats. | • Engine overloaded. | • Shift to lower gear or reduce load. |
| | • Low coolant level. | • Fill cooling system to the correct level; check radiator and hoses for loose connections or leaks. |
| | • Loose or defective fan belt. | • Adjust or replace fan belt. |
| | • Dirty radiator core or grille screens. | • Remove all trash. |
| | • Coolant flow route corroded. | • Flush cooling system. |

If you have any questions, consult your local KUBOTA Dealer.
Consult your local KUBOTA Dealer for further detail.

• Rear Work Light.  
  High visibility for night work.
• Front end weights  
  For front ballast  
• Mounting Kit (Front end weights)  
  To mount Front end weights  
• Engine Block Heater  
  For extremely cold weather starting  
• Rear Remote Hydraulics

KUBOTA Corporation is ... 

Since its inception in 1890, KUBOTA Corporation has grown to rank as one of the major firms in Japan.

To achieve this status, the company has through the years diversified the range of its products and services to a remarkable extent. Nineteen plants and 16,000 employees produce over 1,000 different items, large and small.

All these products and all the services which accompany them, however, are unified by one central commitment. KUBOTA makes products which, taken on a national scale, are basic necessities. Products which are indispensable. Products which are intended to help individuals and nations fulfill the potential inherent in their environment. KUBOTA is the Basic Necessities Giant.

This potential includes water supply, food from the soil and from the sea, industrial development, architecture and construction, and transportation.

Thousands of people depend on KUBOTA’s know-how, technology, experience and customer service. You too can depend on KUBOTA.
