Engine Speed Control
FOREWORD

You are now the proud owner of a KUBOTA Tractor. This tractor is a product of KUBOTA quality engineering and manufacturing. It is made of fine materials and under a rigid quality control system. It will give you long, satisfactory service. To obtain the best use of your tractor, please read this manual carefully. It will help you become familiar with the operation of the tractor and contains many helpful hints about tractor maintenance. It is KUBOTA's policy to utilize as quickly as possible every advance in our research. The immediate use of new techniques in the manufacture of products may cause some small parts of this manual to be outdated. KUBOTA distributors and dealers will have the most up-to-date information. Please do not hesitate to consult with them.

⚠️ SAFETY FIRST

This symbol, the industry's "Safety Alert Symbol", is used throughout this manual and on labels on the machine itself to warn of the possibility of personal injury. Read these instructions carefully. It is essential that you read the instructions and safety regulations before you attempt to assemble or use this unit.

⚠️ DANGER: Indicates an imminently hazardous situation which, if not avoided, will result in death or serious injury.

⚠️ WARNING: Indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury.

⚠️ CAUTION: Indicates a potentially hazardous situation which, if not avoided, may result in minor or moderate injury.

IMPORTANCE: Indicates that equipment or property damage could result if instructions are not followed.

NOTE: Gives helpful information.

SAFE OPERATION

Careful operation is your best insurance against an accident. Read and understand this manual carefully before operating the tractor. All operators, no matter how much experience they may have, should read this and other related manuals before operating the tractor or any implement attached to it. It is the owner’s obligation to instruct all operators in safe operation.

1. BEFORE OPERATING THE TRACTOR

1. Know your equipment and its limitations. Read this entire manual before attempting to start and operate the tractor.
2. Pay special attention to the danger, warning and caution labels on the tractor.
3. KUBOTA recommends the use of a CAB or Roll Over Protective Structures (ROPS) and seat belt in almost all applications. This combination will reduce the risk of serious injury or death, should the tractor be upset. If the tractor is equipped with a foldable ROPS it may be temporarily folded down only when absolutely necessary for areas with height constraints. (There is no operator protection provided by the ROPS in the folded position. For operator safety the ROPS should be placed in the upright and locked position and the seat belt fastened for all other operations.) If the CAB or ROPS is loosened or removed for any reason, make sure that all parts are reinstalled correctly before operating the tractor. Never modify or repair a ROPS because welding, bending, drilling, grinding, or cutting may weaken the structure. A damaged CAB or ROPS structure must be replaced, not repaired or revised. If any structural member of the CAB or ROPS is damaged, replace the entire structure at your local KUBOTA Dealer.

(1) ROPS
(2) Seat belt
4. Always use the seat belt if the tractor has a CAB or ROPS. Do not use the seat belt if a foldable ROPS is down or there is no ROPS. Check the seat belt regularly and replace if frayed or damaged.
5. Do not operate tractor or any implement attached to it while under the influence of alcohol, medication, controlled substances or while fatigued.
6. Carefully check the vicinity before operating tractor or any implement attached to it. Check for overhead clearance which may interfere with a CAB or ROPS. Do not allow any bystanders around or near tractor during operation.
7. Before allowing other people to use your tractor, explain how to operate and have them read this manual before operation.
8. Never wear loose, torn, or bulky clothing around tractor. It may catch on moving parts or controls, leading to the risk of an accident. Use additional safety items, e.g. hard hat, safety boots or shoes, eye and hearing protection, gloves, etc., as appropriate or required.
9. Do not allow passengers to ride on any part of the tractor at anytime. The operator must remain in the tractor seat during operation.
10. Check brakes, clutch, and other mechanical parts for improper adjustment and wear. Replace worn or damaged parts promptly. Check the tightness of all nuts and bolts regularly. (For further details, see "MAINTENANCE" section.)
11. Keep your tractor clean. Dirt, grease, and trash buildup may contribute to fires and lead to personal injury.
12. Use only implements meeting the specifications listed under "IMPLEMENT LIMITATIONS" in this manual or implements approved by KUBOTA.
13. Use proper weights on the front or rear of the tractor to reduce the risk of upsets. When using the front loader, put an implement or ballast on the 3-point hitch to improve stability. Follow the safe operating procedures specified in the implementation or attachment manual.

14. The narrower the tread, the greater the risk of a tractor upset. For maximum stability, adjust the wheels to the widest practical tread width for your application. (See "TIRES, WHEELS AND BALLAST" section)

15. Do not modify the tractor. Unauthorized modification may affect the function of the tractor, which may result in personal injury.

2. OPERATING THE TRACTOR

◆ Starting
1. Always sit in the operator's seat when starting engine or operating levers or controls.
2. Before starting the engine, make sure that all levers (including auxiliary control levers) are in their neutral positions, that the parking brake is engaged, and that both the clutch and the Power Take-Off (PTO) are disengaged or "OFF". Fasten the seat belt if the tractor has a CAB, a fixed ROPS or a foldable ROPS in the upright and locked position.
3. Do not start engine by shorting across starter terminals or bypassing the safety start switch. Machine may start in gear and move if normal starting circuitry is bypassed.
4. Do not operate or idle engine in a non-ventilated area. Carbon monoxide gas is colorless, odorless, and deadly.
5. Check before each use that operator presence controls are functioning correctly. Test safety systems. (See "EVERY 50 HOURS, Checking Engine Start System" in "PERIODIC SERVICE" section)

◆ Working
1. Pull only from the drawbar. Never hitch to axle housing or any other point except drawbar; such arrangements will increase the risk of serious personal injury or death due to a tractor upset.

2. Keep all shields and guards in place. Replace any that are missing or damaged.
3. Avoid sudden starts. To avoid upsets, slow down when turning, on uneven ground, and before stopping.
4. The tractor cannot turn with the differential locked and attempting to do so could be dangerous.
5. Do not operate near ditches, holes, embankments, or other ground surface features which may collapse under the tractor's weight. The risk of tractor upset is even higher when the ground is loose or wet. Tall grass can hide obstacles, walk the area first to be sure.
6. Watch where you are going at all times. Watch for and avoid obstacles. Be alert at row ends, near trees, and other obstructions.
7. When working in groups, always let the others know what you are going to do before you do it.
8. Never try to get on or off a moving tractor.

◆ Safety for children
Tragedy can occur if the operator is not alert to the presence of children. Children generally are attracted to machines and the work they do.
1. Never assume that children will remain where you last saw them.
2. Keep children out of the work area and under the watchful eye of another responsible adult.
3. Be alert and shut your machine down if children enter the work area.
4. Never carry children on your machine. There is no safe place for them to ride. They may fall off and be run over or interfere with your control of the machine.
5. Never allow children to operate the machine even under adult supervision.
6. Never allow children to play on the machine or on the implement.
7. Use extra caution when backing up. Look behind and down to make sure area is clear before moving.
8. When parking your machine if at all possible park on a firm, flat and level surface; if not, park across a slope. Set the parking brake(s), lower the implements to the ground, remove the key from the ignition and lock the cab door (if equipped) and chock the wheels.

◆ Operating on slopes
Slopes are major factor related to loss-of-control and tip-over accidents, which can result in severe injury or death. All slopes require extra caution.
1. To avoid upsets, always back up steep slopes. If you cannot back up the slope or if you feel uneasy on it, do not operate on it. Stay off slopes too steep for safe operation.
2. Driving forward out of a ditch, mired condition or up a steep slope increases the risk of a tractor to be upset backward. Always back out of these situations. Extra caution is required with four-wheel drive models because their increased traction can give the operator false confidence in the tractor's ability to climb slopes.
3. Keep all movement on slopes slow and gradual. Do not make sudden changes in speed or direction.
4. Avoid disengaging the clutch or changing gears speed when climbing or going down a slope. If on a slope disengaging the clutch or changing gears to neutral could cause loss of control.
5. To improve stability on slope, set widest wheel tread as shown in "TIRE, WHEEL AND BALLAST" section. Follow recommendations for proper ballasting.

◆ Driving the tractor on the road
1. Lock the two brake pedals together to help assure straight-line stops. Uneven braking at road speeds could cause the tractor to tip over.
2. Check the front wheel engagement. The braking characteristics are different between two and four wheel drive. Be aware of the difference and use carefully.
3. Always slow the tractor down before turning. Turning at high speed may tip the tractor over.

4. Make sure that the Slow Moving Vehicle (SMV) sign is clean and visible. Use hazard lights and turn signals as required.

5. Observe all local traffic and safety regulations.
6. Turn the headlights on. Dim them when meeting another vehicle.
7. Drive at speeds that allow you to maintain control at all times.
8. Do not apply the differential lock while traveling at road speeds. The tractor may run out of control.
9. Avoid sudden motions of the steering wheel as they can lead to a dangerous loss of stability. The risk is especially great when the tractor is traveling at road speeds.
10. Do not operate an implement while the tractor is on the road. Lock the 3-point hitch in the raised position.
11. When towing other equipment, use a safety chain and place an SMV emblem on it as well.
3. PARKING THE TRACTOR

1. Disengage the PTO, lower all implements to the ground, place all control levers in their neutral positions, set the parking brake, stop the engine, and remove the key.
2. Make sure that the tractor has come to a complete stop before dismounting.
3. Avoid parking on steep slopes, if possible park on flat ground, if not, park across a slope, always with attachment on the ground.

4. OPERATING THE PTO

1. Wait until all moving components have completely stopped before getting off the tractor, connecting, disconnecting, adjusting, cleaning, or servicing any PTO driven equipment.
2. Keep the PTO shaft cover in place at all times. Replace the PTO shaft cap when the shaft is not in use.
3. Before installing or using PTO driven equipment, read the manufacturer's manual and review the safety labels attached to the equipment.
4. When operating stationary PTO driven equipment, always apply the tractor parking brake and place chocks behind and in front of the rear wheels. Stay clear of all rotating parts. Never step over rotating parts.

5. USING 3-POINT HITCH

1. Use the 3-point hitch only with equipment designed for 3-point hitch usage.
2. When using a 3-point hitch mounted implement, be sure to install the proper counterbalance weight on the front of the tractor.
3. When transporting on the road, set the implement lowering speed knob in the "LOCK" position to hold the implement in the raised position.

6. SERVICING THE TRACTOR

Before servicing the tractor, park it on a firm, flat and level surface, set the parking brake, lower all implements to the ground, place the gear shift lever in neutral, stop the engine and remove the key.
1. Allow the tractor time to cool off before working on or near the engine, muffler, radiator, etc.
2. Always stop the engine before refueling. Avoid spills and overfilling.
3. Do not smoke when working around battery or when refueling. Keep all sparks and flames away from battery and fuel tank. The battery presents an explosive hazard, because it gives off hydrogen and oxygen especially when recharging.
4. Before "jump starting" a dead battery, read and follow all of the instructions. (See "JUMP STARTING" in "OPERATING THE ENGINE" section)
5. Keep first aid kit and fire extinguisher handy at all times.
6. Do not remove radiator cap while coolant is hot. When cool, slowly rotate cap to the first stop and allow sufficient time for excess pressure to escape before removing the cap completely. If the tractor has a coolant recovery tank, add coolant or water to the tank, not the radiator. (See "CHECKING COOLANT LEVEL" in "MAINTENANCE" section)
7. Disconnect the battery’s ground cable before working on or near electric components.

8. To avoid the possibility of battery explosion, do not use or charge the refillable type battery if the fluid level is below the LOWER (lower limit level) mark. Check the fluid level regularly and add distilled water as required so that the fluid level between the UPPER and LOWER levels.

9. To avoid sparks from an accidental short circuit, always disconnect the battery’s ground cable (-) first and reconnect it last.

10. Do not attempt to mount a tire on a rim. This should be done by a qualified person with the proper equipment.

11. Do not work under any hydraulically supported devices. They can settle, suddenly leak down, or be accidentally lowered. If necessary to work under tractor or any machine elements for servicing or adjustment, securely support them with stands or suitable blocking beforehand.

12. Always maintain the correct tire pressure. Do not inflate tires above the recommended pressure shown in the operator’s manual.

13. Securely support the tractor when either changing wheels or adjusting the wheel tread width.

14. Make sure that wheel bolts have been tightened to the specified torque.

15. Escaping hydraulic fluid under pressure has sufficient force to penetrate skin, causing serious personal injury. Before disconnecting hydraulic lines, be sure to release all residual pressure. Before applying pressure to the hydraulic system, make sure that all connections are tight and that all lines, pipes, and hoses are free of damage.

Fluid escaping from pinholes may be invisible. Do not use hands to search for suspected leaks; use a piece of cardboard or wood. Use of safety goggles or other eye protection is also highly recommended. If injured by escaping fluid, see a medical doctor at once. This fluid will produce gangrene or severe allergic reaction.
7. DANGER, WARNING AND CAUTION LABELS

(1) Part No. TA140-4933-1

⚠️ WARNING ⚠️
BEFORE DISMOUNTING TRACTOR:
1. ALWAYS SET PARKING BRAKE.
2. PARK ON LEVEL GROUND WHENEVER POSSIBLE.
   If parking on a slope, position tractor across
   the slope.
3. LOWER ALL IMPLEMENTS TO THE GROUND.
   Failure to comply to this warning may allow the
   wheels to slip, and could cause injury or death.
4. LOCK SHUTTLE SHIFT LEVER IN NEUTRAL
   POSITION AND STOP THE ENGINE.

(2) Part No. TA240-9848-1 [Foldable ROPS type]

⚠️ WARNING ⚠️
TO AVOID INJURY OR DEATH FROM ROLL-OVER:
- Keep Roll-Over Protective Structures (ROPS)
  in the upright and locked position.
- Fasten SEAT BELT before operating.

THERE IS NO OPERATOR PROTECTION WHEN THE ROPS IS IN THE FOLDED POSITION:
- Check the operating area and fold the ROPS only
  when absolutely necessary.
- Do not wear SEAT BELT if ROPS is folded.
- Raise and lock ROPS as soon as vertical clearance allows.
- Read ROPS related instructions and warnings.

(3) Part No. TA040-4956-2
Diesel fuel only. No fire

⚠️ WARNING ⚠️
Never modify or
repair a ROPS
because welding,
grinding, drilling
or cutting any
portion may weaken
the structure.

⚠️ CAUTION ⚠️
TO AVOID INJURY
WHEN RAISING OR
FOLDING ROPS:
- Set parking brake
and stop engine.
- Remove any
obstruction that
may prevent
raising or folding
of the ROPS.
- Do not allow any
bystanders.
- Always perform
function from a
stable position at
the rear of the
tractor.
- Hold the top of
the ROPS securely when
raising or folding.
- Make sure all pins
are installed and
locked.
(1) Part No. TA040-4965-2

⚠️ DANGER
TO AVOID POSSIBLE INJURY OR DEATH FROM A MACHINE RUNAWAY.
1. Do not start engine by shorting across starter terminals or bypassing the safety start switch. Machine may start in gear and move if normal starting circuitry is bypassed.
2. Start engine only from operator's seat with transmission and PTO OFF. Never start engine while standing on the ground.

(2) Part No. TA040-4959-3

⚠️ WARNING
TO AVOID PERSONAL INJURY.
1. Keep PTO shield in place at all times.
2. Do not operate the PTO at speeds faster than the speed recommended by the implement manufacturer.
3. For trailing PTO-driven implements, set drawbar at towing position (see operator's manual).

(3) Part No. TA040-4935-1

⚠️ WARNING
TO AVOID PERSONAL INJURY:
1. Attach pulled or towed loads to the drawbar only.
2. Use the 3-point hitch only with equipment designed for 3-point hitch usage.

Diagram with numbered parts:
1. [Diagram part 1]
2. [Diagram part 2]
3. [Diagram part 3]
CAUTION

TO AVOID PERSONAL INJURY:
1. Read and understand the operator’s manual before operation.
2. Before starting the engine, make sure that everyone is at a safe distance from the tractor and that the PTO is OFF.
3. Do not allow passengers on the tractor at any time.
4. Before allowing other people to use the tractor, have them read the operator’s manual.
5. Check the tightness of all nuts and bolts regularly.
6. Keep all shields in place and stay away from all moving parts.
7. Lock the two brake pedals together before driving on the road.
8. Slow down for turns, or rough roads, or when applying individual brakes.
9. On public roads use SMV emblem and hazard lights, if required by local traffic and safety regulations.
10. Pull only from the drawbar.
11. Before dismounting, lower the implement to the ground, set the parking brake, stop the engine and remove the key.
12. Securely support tractor and implements before working underneath.

DANGER EXPLOSIVE GASES
Cigarettes, flames or sparks could cause battery to explode. Always shield eyes and face from battery. Do not charge or use booster cables or adjust post connections without proper instruction and training.

POISON CAUSES SEVERE BURNS
Contains sulfuric acid. Avoid contact with skin, eyes or clothing. In event of accident flush with water and call a physician immediately.
KEEP OUT OF REACH OF CHILDREN

8. CARE OF DANGER, WARNING AND CAUTION LABELS

1. Keep danger, warning and caution labels clean and free from obstructing material.
2. Clean danger, warning and caution labels with soap and water, dry with a soft cloth.
3. Replace damaged or missing danger, warning and caution labels with new labels from your local KUBOTA Dealer.
4. If a component with danger, warning and caution label(s) affixed is replaced with new part, make sure new label(s) is (are) attached in the same location(s) as the replaced component.
5. Mount new danger, warning and caution labels by applying on a clean dry surface and pressing any bubbles to outside edge.
Your dealer is interested in your new tractor and has the desire to help you get the most value from it. After reading this manual thoroughly, you will find that you can do some of the regular maintenance yourself.

However, when in need of parts or major service, be sure to see your KUBOTA Dealer.

For service, contact the KUBOTA Dealership from which you purchased your tractor or your local KUBOTA Dealer. When in need of parts, be prepared to give your dealer both the tractor and engine serial numbers.

Locate the serial numbers now and record them in the space provided.

PRE-OPERATION CHECK

DAILY CHECK
To prevent trouble from occurring, it is important to know the condition of the tractor well. Check it before starting.

⚠️ CAUTION
To avoid personal injury:
- Be sure to check and service the tractor on a level surface with the engine shut off and the parking brake "ON" and implement lowered to the ground.

Check item
- Walk around inspection
- Check engine oil level
- Check transmission oil level
- Check coolant level
- Clean grill and radiator screen
- Check air cleaner evacuator valve
  (When used in a dusty place)
- Check brake and clutch pedal
- Check indicators, gauges and meter
- Check lights
- Check wire harness
- Check seat belt and ROPS
- Refuel
  (See "DAILY CHECK" in Periodic Service section)
- Care of danger, warning and caution labels
  (See "DANGER, WARNING AND CAUTION LABELS" in Safe Operation section)
**CAUTION**

To avoid personal injury:
- Read "Safe Operation" in the front of this manual.
- Read the danger, warning and caution labels located on the tractor.
- To avoid the danger of exhaust fume poisoning, do not operate the engine in a closed building without proper ventilation.
- Never start engine while standing on ground. Start engine only from operator's seat.
- Make it a rule to set all shift levers to the "NEUTRAL" positions and to place PTO lever in "OFF" position before starting the engine.

**IMPORTANT:**
- Do not use starting fluid or ether.
- To protect the battery and the starter, make sure that the starter is not continuously turned for more than 10 seconds.

---

**STARTING THE ENGINE**

1. **Make sure the parking brake is set.**
   1. To set the parking brake:
      1. Interlock the brake pedals.
      2. Depress the brake pedals.
      3. Latch the brake pedals with the parking brake lever.
   2. To release the parking brake, depress the brake pedals again.

   ![Diagram](1AGAPAJP005A)
   (1) Parking brake lever  
   (A) Interlock the brake pedals  
   (B) "DEPRESS"  
   (C) "PULL"

**IMPORTANT:**
- To prevent damage to the parking brake lever, make sure that brake pedals are fully depressed before pulling the parking brake lever up.
2. Make sure the fuel cock is in the open position.

3. Place the shift levers in "NEUTRAL" position.

4. Place the PTO clutch control lever in "OFF" position

5. Place the hydraulic control levers in "LOWEST" position

(1) Fuel cock
(A) "CLOSE"
(B) "OPEN"

(1) PTO clutch control lever
• "ON"
• "OFF"

(1) Position control lever
(2) Draft control lever (if equipped)

(A) "DOWN"

(1) Main gear shift lever
(2) Range gear shift lever
(Shuttle shift lever)
(H) "HIGH"
(N) "NEUTRAL POSITION"
(L) "LOW"
(R) "REVERSE"
6. Set the throttle lever to about 1/2 way.

7. Insert the key into the key switch and turn it "ON".

◆ Check Warning lamps:
When the key is turned "ON", lamps (1) (2) should come on. If trouble should occur at any location while the engine is running, the warning lamp corresponding to that location comes on.

(1) Engine oil pressure
(2) Electrical charge
(3) Glow plug indicator

IMPORTANT:
- Daily checks with the warning lamps only are not sufficient. Never fail to conduct physical daily checks carefully by referring to Daily Check section.
(See "DAILY CHECK" in Periodic Service Section)
8. Fully depress the clutch pedal.

9. Turn the key to "START" position and release when the engine starts.

**IMPORTANT:**
- Because of the safety devices, the engine will not start except when the PTO clutch control lever is in the "OFF" position and range gear shift lever is in the "NEUTRAL" position.

10. Check to see that engine oil pressure and electrical charge lamps are "OFF".

If the lamp is still on, immediately stop the engine and determine the cause.

11. Release the clutch pedal.

---

**COLD WEATHER STARTING**

If the ambient temperature is below -5°C (23°F) and the engine is very cold, start it in the following manner: Take steps (1) through (8) above.

9. Turn the key to "PREHEAT" and keep it there for ten seconds.

10. Turn the key to the start position and the engine should start.

(If the engine fails to start after 10 seconds, turn off the key for 30 seconds. Then repeat steps (9) and (10). To protect the battery and the starter, make sure that the starter is not continuously turned for more than 10 seconds.)

■ **Block Heater (if equipped)**

A block heater is available as an option from your dealer. It will assist you in starting your tractor when the ambient temperature is below -20 °C (-4 °F).
STOPPING THE ENGINE

1. After slowing the engine to idle, turn the key to "OFF".
2. Remove the key.

NOTE:
- If key does not stop the engine, consult your local KUBOTA Dealer.

WARMING UP

⚠️ CAUTION
To avoid personal injury:
- Be sure to set the parking brake during warm-up.
- Be sure to set all shift levers to the "NEUTRAL" positions and to place PTO lever in "OFF" position during warm-up.

For five minutes after engine start-up, allow engine to warm up without applying any load, this is to allow oil to reach every engine part. If load should be applied to the engine without this warm-up period, trouble such as seizure, breakage or premature wear may develop.

Warm-Up Transmission Oil in the Low Temperature Range
Hydraulic oil serves as transmission fluid. In cold weather, the oil may be cold with increased viscosity. This can cause delayed oil circulation or abnormally low hydraulic pressure for some time after engine start-up. This in turn can result in trouble in the hydraulic system. To prevent the above, observe the following instructions:
Warm up the engine at about 50% of rated rpm according to the table below:

<table>
<thead>
<tr>
<th>Ambient temperature</th>
<th>Warm-up time requirement</th>
</tr>
</thead>
<tbody>
<tr>
<td>Higher than -10 °C (14 °F)</td>
<td>Approx. 5 minutes</td>
</tr>
<tr>
<td>-15 to -10 °C (5 to 14 °F)</td>
<td>5 to 10 minutes</td>
</tr>
<tr>
<td>-20 to -15 °C (-4 to 5 °F)</td>
<td>10 to 20 minutes</td>
</tr>
<tr>
<td>Below -20 °C (-4 °F)</td>
<td>More than 20 minutes</td>
</tr>
</tbody>
</table>

IMPORTANT:
- Do not operate the tractor under full load condition until it is sufficiently warmed up.

JUMP STARTING

⚠️ CAUTION
To avoid personal injury:
- Battery gases can explode. Keep cigarettes, sparks, and flames away from battery.
- If tractor battery is frozen, do not jump start engine.
- Do not connect other end of negative (-) jumper cable to negative (-) terminal of tractor battery.

When jump starting engine, follow the instructions below to safely start the engine.
1. Bring helper vehicle with a battery of the same voltage as disabled tractor within easy cable reach. "THE VEHICLES MUST NOT TOUCH".
2. Engage the parking brakes of both vehicles and put the shift levers in neutral. Shut both engines off.
3. Put on safety goggles and rubber gloves.
4. Ensure the vent caps are securely in place. (if equipped)
5. Cover vent holes with damp rags. Do not allow the rag to touch the battery terminals.
6. Attach the red clamp to the positive (red, (+) or pos.) terminal of the dead battery and clamp the other end of the same cable to the positive (red, (+) or pos.) terminal of the helper battery.
7. Clamp the other cable to the negative (black, (-) or neg.) terminal of the helper battery.
8. Clamp the other end to the engine block or frame of the disabled tractor as far from the dead battery as possible.
9. Start the helper vehicle and let its engine run for a few moments. Start the disabled tractor.
10. Disconnect the jumper cables in the exact reverse order of attachment. (Steps 8, 7 and 6).
11. Remove and discard the damp rags.

Diagram:
- (1) Dead battery
- (2) Lay a damp rag over the vent caps
- (3) Jumper cables
- (4) Helper battery

Connect cables in numerical order. Disconnect in reverse order after use.
IMPORTANT:
- This machine has a 12 volt negative (-) ground starting system.
- Use only same voltage for jump starting.
- Use of a higher voltage source on tractor's electrical system could result in severe damage to tractor's electrical system.
  Use only matching voltage source when "Jump starting" a low or dead battery condition.
OPERATING THE TRACTOR

OPERATING NEW TRACTOR
How a new tractor is handled and maintained determines the life of the tractor.
A new tractor just off the factory production line has been, of course, tested, but the various parts are not accustomed to each other, so care should be taken to operate the tractor for the first 50 hours at a slower speed and avoid excessive work or operation until the various parts become "broken-in." The manner in which the tractor is handled during the "breaking-in" period greatly affects the life of your tractor. Therefore, to obtain the maximum performance and the longest life of the tractor, it is very important to properly break-in your tractor. In handling a new tractor, the following precautions should be observed.

Do not Operate the Tractor at Full Speed for the First 50 Hours
- Do not start quickly nor apply the brakes suddenly.
- In winter, operate the tractor after fully warming up the engine.
- Do not run the engine at speeds faster than necessary.
- On rough roads, slow down to suitable speeds.
- Do not operate the tractor at fast speed.

The above precautions are not limited only to new tractors, but to all tractors. But it should be especially observed in the case of new tractors.

Changing Lubricating Oil for New Tractors
The lubricating oil is especially important in the case of a new tractor. The various parts are not "broken-in" and are not accustomed to each other; small metal grit may develop during the operation of the tractor; and this may wear out or damage the parts. Therefore, care should be taken to change the lubricating oil a little earlier than would ordinarily be required.
For further details of change interval hours.
(See "MAINTENANCE" section)

OPERATING FOLDABLE ROPS (if equipped)

⚠️ CAUTION
- When raising or folding the ROPS, apply parking brake, stop the engine and remove the key.
- Always perform function from a stable position at the rear of tractor.
- Fold the ROPS down only when absolutely necessary and fold it up and lock it again as soon as possible.
- Before proceeding to fold ROPS, check for any possible interference with installed implements and attachments.
- If interference occurs, contact your KUBOTA Dealer.

To Fold the ROPS
1. Remove both set bolts.

2. Fold the ROPS.

⚠️ CAUTION
To avoid personal injury:
- Hold the ROPS tightly with both hands and fold the ROPS slowly and carefully.
3. Align set bolt holes and insert both set bolts. Slightly tighten the set bolts and secure them with the hair pin cotters.

**CAUTION**

To avoid personal injury:
- Make sure that both set bolts are properly installed and secured with the hair pin cotters.

To Raise the ROPS to Upright Position

1. Remove both hair pin cotters and set bolts.

**CAUTION**

To avoid personal injury:
- Raise the ROPS slowly and carefully.

2. Raise ROPS to the upright position.

3. Align set bolt holes and insert both set bolts. Slightly tighten the set bolts and secure them with the hair pin cotters.

**CAUTION**

To avoid personal injury:
- Make sure that both set bolts are properly installed as soon as the ROPS is in the upright position and secured with the hair pin cotters.
**Adjustment of Foldable ROPS**
- Adjust free fall of the ROPS upper frame regularly.
- If you feel less friction in folding the ROPS, remove the cotter pin (1), tighten the nut (2) until you feel the right friction in the movement and then replace the cotter pin.

**STARTING**

1. Adjusting the operator's position.

**Operator's Seat**

⚠️ **CAUTION**
To avoid personal injury:
- Make adjustments to the seat only while the tractor is stopped.
- Make sure that the seat is completely secured after each adjustment.
- Do not allow any person other than the driver to ride on the tractor.

(1) Cotter pin
(2) Nut

(1) Travel adjust lever

(1) Suspension adjust handle
A) To decrease tension
B) To increase tension
◆ Travel adjustment
Pull up the travel adjust lever and slide the seat backward or forward, as required. The seat will lock in position when the lever is released.

◆ Suspension adjustment
Turn the suspension adjust handle to achieve the optimum suspension setting.

IMPORTANT:
- After adjusting the operator's seat, be sure to check to see that the seat is properly locked.
- Position the suspension adjust handle at the horizontal position.

■ Seat Belt

⚠️ WARNING
To avoid personal injury:
- Always use the seat belt when any ROPS or CAB are installed.
- Do not use the seat belt if a foldable ROPS is down or there is no ROPS.

Adjust the seat belt for proper fit and connect the buckle. This seat belt is auto-locking retractable type.

2. Selecting light switch positions.

■ Head Light / Turn Signal / Hazard Light Switch

◆ Head Light Switch
Turn the light switch clockwise, and the following lights are activated on the switch position.

(A) OFF.... Head lights OFF.
(B) ⬆️.... Head lights dimmed, low beam.
(C) ⬇️.... Head lights ON, high beam.

◆ Hazard Light Switch
When hazard light switch is pushed, the hazard lights flash along with the indicator on the instrument panel. Press the hazard light switch again to turn off the light.

◆ Turn Signal with Hazard Light
1. To indicate a right turn with the hazard lights already flashing (hazard on), turn the knob clockwise.
2. To indicate a left turn with the hazard lights already flashing, turn the knob counterclockwise.
3. When the left or right turn signal is activated in combination with the hazard lights, the indicated turning light will flash and the other will stay on.

◆ Turn Signal without Hazard light
1. To indicate a right turn without hazard lights (hazard off), turn the knob clockwise.
2. To indicate a left turn without hazard lights, turn the knob counterclockwise.
3. When the left or right turn signal is activated without the hazard lights, the indicated turning light will flash and the other will be on.
NOTE:
- Be sure to return switch to center position after turning.

Tractor Lights
(1) Head light
(2) Side turn signal / Hazard light
(3) Tail light
(4) Rear turn signal / Hazard light

(4) Hazard / Turn signal indicator

(1) Head light switch
(2) Turn signal light switch
(A) "OFF"
(B) "ON (LOW)"
(C) "ON (HIGH)"
3. Checking the brake pedal.

**Brake Pedals (Right and Left)**

**WARNING**
To avoid personal injury:
- Be sure to interlock the right and left pedals. Applying only one rear wheel brake at high speeds could cause the tractor to swerve or roll-over.
- Be sure brake pedals have equal adjustment when using locked together. Incorrect or unequal brake pedal adjustment can cause the tractor to swerve or roll-over.

**CAUTION**
To avoid personal injury:
- Do not make sudden braking. An accident may occur such as by heavy towed load shifting forward or loss of control.
- To avoid skidding and loss of steering control when driving on icy, wet, or loose surfaces, make sure the tractor is correctly ballasted, operated at reduced speed, operated with front wheel drive engaged (if equipped).
- The braking characteristics are different between two and four wheel drive. Be aware of the difference and use carefully.

1. Before operating the tractor on the road or before applying the parking brake, be sure to interlock the right and left pedals as illustrated below.
2. Use individual brakes to assist in making sharp turns at slow speeds (Field Operation Only). Disengage the brake pedal lock and depress only one brake pedal.
3. Be sure brake pedals have equal adjustment when using locked together.

4. Raise the implement. (See "HYDRAULIC UNIT" section)
5. Depress the clutch pedal.

**Clutch Pedal**

**CAUTION**
To avoid personal injury:
- Sudden release of the clutch may cause the tractor to lunge in an unexpected manner.

The clutch is disengaged when the clutch pedal is fully pressed down.

**IMPORTANT:**
To help prevent premature clutch wear:
- The clutch pedal must be quickly disengaged and be slowly engaged.
- Avoid operating the tractor with your foot resting on the clutch pedal.
- Select proper gear and engine speed depending on the type of job.

6. Selecting the Travel Speed.

**Main Gear Shift Lever & Range Gear Shift Lever**
The main gear shift lever pattern is in the form of a "H". The range gear shift lever moves in the form of a "J" in 3 stages, "HIGH", "LOW" and "REVERSE".
By combination and use of the main gear shift lever and the range gear shift lever, eight forward speeds and four reverse speeds are obtained.

**IMPORTANT:**
- To change speeds, press the clutch pedal completely down and stop the tractor before attempting to proceed with speed change.

**NOTE:**
- When you stand up from the seat with the range gear shift at "FORWARD" or "REVERSE", the engine will stop regardless of whether the machine is moving or not.
This is because the tractor is equipped with Operator Presence Control system (OPC).
Front Wheel Drive Lever

**CAUTION**
To avoid personal injury:
- Do not engage the front wheel drive when traveling at road speed.
- When driving on icy, wet, or loose surfaces, make sure the tractor is correctly ballasted to avoid skidding and loss of steering control. Operate at reduced speed and engage front wheel drive.
- An accident may occur if the tractor is suddenly braked, such as by heavy towed loads shifting forward or loss of control.
- The braking characteristics are different between two and four wheel drive. Be aware of the difference and use carefully.

Use the lever to engage the front wheels with the tractor stopped. Shift the lever to "ON" to engage the front wheel drive.

![Diagram of front wheel drive lever]

(1) Front wheel drive lever  
(A) "ON"  
(B) "OFF"

**IMPORTANT:**
- Depress the clutch pedal before engaging the front wheel drive lever.
- If the front wheel drive lever is difficult to set to OFF, stop the tractor, turn the steering wheel and move the lever.
- Tires will wear quickly if front wheel drive is engaged on paved roads.

- Front wheel drive is effective for the following jobs:
  1. When greater pulling force is needed, such as working in a wet field, when pulling a trailer, or when working with a front-end loader.
  2. When working in sandy soil.
  3. When working on a hard soil where a rotary tiller might push the tractor forward.
  4. For increased braking at reduced speed.

7. Accelerate the engine.

Hand Throttle Lever
Pulling the throttle lever back increases engine speed, and pushing it forward decreases engine speed.

Foot Throttle
Use the foot throttle when traveling on the road. Press down on it for higher speed. The foot throttle is interlocked with the hand throttle lever; when using the foot throttle, keep the hand throttle lever in low idling position.

![Diagram of throttle controls]

(1) Hand throttle lever  
(2) Foot throttle

"INCREASE"  
"DECREASE"

8. Unlock the parking brake and slowly release the clutch.

Parking Brake Lever
To release the parking brake, depress the brake pedals again.

![Diagram of parking brake lever]
STOPPING

Stopping
1. Slow down the engine.
2. Step on the clutch and brake pedal.
3. After the tractor has stopped, disengage the PTO, lower the implement to the ground, shift the transmission to neutral, release the clutch pedal, and set the parking brake.

CHECK DURING DRIVING

Immediately Stop the Engine if:
- The engine suddenly slows down or accelerates,
- Unusual noises suddenly are heard,
- Exhaust fumes suddenly become very dark,
While driving, make the following checks to see that all the parts are functioning normally.

Easy Checker(TM)
If the indicators in the Easy Checker(TM) come on during operation, immediately stop the engine, and find the cause as shown below.
Never operate the tractor while Easy Checker(TM) lamp is on.

- Engine oil pressure
  If the oil pressure in the engine goes below the prescribed level, the indicator in the Easy Checker(TM) will come on.
  If this should happen during operation, and it does not go off when the engine is accelerated to more than 1000 rpm, check level of engine oil.
  (See "Checking Engine Oil Level" in daily check in Periodic Service section)

- Electrical charge
  If the alternator is not charging the battery, the indicator in the Easy Checker(TM) will come on.
  If this should happen during operation, check the electrical charging system or consult your local KUBOTA Dealer.

Note:
- For checking and servicing of your tractor, consult your local KUBOTA Dealer for instructions.

Fuel Gauge
When the key switch is on, the fuel gauge indicates the fuel level.
Be careful not to empty the fuel tank. Otherwise air may enter the fuel system.
Should this happen, the system should be bled. (See "Bleeding Fuel System" in as required in Periodic Service section)
Coolant Temperature Gauge

⚠️ CAUTION
To avoid personal injury:
- Do not remove radiator cap until coolant temperature is well below its boiling point. Then loosen cap slightly to the stop to relieve any pressure before removing cap completely.

1. With the key switch at "ON", this gauge indicates the temperature of the coolant. "C" for "cold" and "H" for "hot".
2. If the indicator reaches the "H" position (red zone), engine coolant is overheated. Check the tractor by referring to "Troubleshooting" section.

Hourmeter/Tachometer
This meter gives readings for engine speed, PTO shaft speed and the hours the tractor has been operated.
1. The tachometer indicates the engine speed and the 540 PTO shaft speed location on the dial.
2. The hourmeter indicates in five digits the hours the tractor has been used; the last digit indicates 1/10 of an hour.

![Hourmeter/Tachometer Diagram]

(1) Engine revolution
(2) Hours used
(A) PTO: 540rpm

(1) Coolant temperature gauge
PARKING

■ Parking

⚠️ CAUTION
To avoid personal injury:
BEFORE DISMOUNTING TRACTOR
- ALWAYS SET PARKING BRAKE AND LOWER ALL IMPLEMENTS TO THE GROUND.
- STOP THE ENGINE AND REMOVE THE KEY.

1. When parking, be sure to set the parking brake.
   To set the parking brake;
   (1) Interlock the brake pedals.
   (2) Depress the brake pedals.
   (3) Latch the brake pedals with the parking brake lever.

![Image showing parking brake lever]

(1) Parking brake lever (A) Interlock the brake pedals
(B) "DEPRESS"
(C) "PULL"

IMPORTANT:
- To prevent damage to the parking brake lever, make sure that brake pedals are fully depressed before pulling the parking brake lever.

2. Before getting off the tractor, disengage the PTO, lower all implements to the ground, place all control levers in their neutral positions, set the parking brake, stop the engine and remove the key.

3. If it is necessary to park on an incline, be sure to chock the wheels to prevent accidental rolling of the machine.

OPERATING TECHNIQUES

■ Differential Lock

⚠️ WARNING
To avoid personal injury due to loss of steering control:
- Do not operate the tractor at high speed with differential lock engaged.
- Do not attempt to turn with the differential lock engaged.
- Be sure to release the differential lock before making a turn in field conditions.

If one of the rear wheels should slip, step on the differential lock pedal. Both wheels will then turn together, reducing slippage.
Differential lock is maintained only while the pedal is depressed.

![Image showing differential lock pedal]

(1) Differential lock pedal (A) Press to "ENGAGE"
   (B) Release to "DISENGAGE"

IMPORTANT:
- When using the differential lock, always slow the engine down.
- To prevent damage to power train, do not engage differential lock when one wheel is spinning and the other is completely stopped.
- If the differential lock cannot be released, step lightly on the brake pedals alternately.
Operating the Tractor on a Road

**CAUTION**
To avoid personal injury:
- To help assure straight line stops when driving at transport speeds, lock the brake pedals together. Uneven braking at road speeds could cause the tractor to roll-over.
- When traveling on road with 3-point hitch mounted implement attached, be sure to have sufficient front weight on the tractor to maintain steering ability.

Be sure SMV emblem and warning lamps are clean and visible. If towed or rear-mounted equipment obstructs these safety devices, install SMV emblem and warning lamps on equipment.

Consult your local KUBOTA Dealer for further details.

---

Operating on Slopes and Rough Terrain

**CAUTION**
To avoid personal injury:
- Always back up when going up a steep slope. Driving forward could cause the tractor to tip over backward. Stay off hills and slopes too steep for safe operation.
- Avoid changing gears when climbing or descending a slope.
- If operating on a slope, never disengage the clutch or shift levers to neutral. Doing so could cause loss of control.
- Do not drive the tractor close to the edges of ditches or banks which may collapse under the weight of the tractor. Especially when the ground is loose or wet.

1. Be sure wheel tread is adjusted to provide maximum stability. (See "Wheel Adjustment" in Tires, Wheels and Ballast section)
2. Slow down for slopes, rough ground, or sharp turns, especially when transporting heavy, rear mounted equipment.
3. Before descending a slope, shift to a gear low enough to control speed without using brakes.

---

**Directions for Use of Power Steering**

1. Power steering is activated only while the engine is running. Slow engine speeds make the steering a little heavier. While the engine is stopped, the tractor functions in the same manner as tractors without power steering.
2. When the steering wheel is turned all the way to the stop, the relief valve is activated. Do not hold the steering wheel in this position for a long period of time.
3. Avoid turning the steering wheel while the tractor is stopped, or tires may wear out sooner.
4. The power steering mechanism makes the steering easier. Be careful when driving on a road at high speeds.
PTO OPERATION

CAUTION
To avoid personal injury:
- Disengage PTO, stop engine, and allow all rotating components to come to a complete stop before connecting, disconnecting, adjusting, or cleaning any PTO driven equipment.

PTO Clutch Control Lever
1. The tractor has a 540 rpm speed position.
2. The PTO clutch control lever engages or disengages the PTO clutch which gives the PTO independent control.
   Shift the lever to "ON" to engage the PTO clutch. Shift the lever to "OFF" to disengage the PTO clutch.

NOTE:
- There is a PTO-1 540 rpm indicated mark on the tachometer board.
- Tractor engine will not start if the PTO clutch control lever is in the engaged "ON" position.

Stationary PTO
To park the tractor and use the PTO system (for chipper or pump, for example), start the PTO system in the following steps.
1. Apply the parking brakes and place blocks at the tires.
2. Make sure the shift levers are at NEUTRAL, and start the engine.
3. Tilt the operator's seat forward.
4. Set the PTO clutch control lever to engage "ON".
5. Set the engine speed to provide recommended rear PTO speed.

NOTE:
- If the PTO system is engaged and you stand up from the seat or the seat is not tilted forward, the engine stops automatically after standing up.

<table>

THREE-POINT HITCH & DRAWBAR

1. Top link
2. Lifting rod (Left)
3. Telescopic stabilizers
4. Lower link
5. Lifting rod (Right)
6. Drawbar
7. Fixed drawbar frame
8. Swing drawbar frame (if equipped)
3-POINT HITCH

1. Make preparations for attaching implement.

**Selecting the top link mounting holes**
Select the proper set of holes by referring to the "Hydraulic Control Unit Use Reference Chart" in Hydraulic Unit section.
If the hydraulic unit is set for draft control, draft response is more sensitive when an implement is connected to the upper set of top link mounting holes. If draft control is not required, it is recommended to use the low set (4).

<table>
<thead>
<tr>
<th>With Position Control</th>
<th>With Draft Control</th>
</tr>
</thead>
</table>

**Drawbar**
Remove the drawbar if close mounted implement is being attached.

2. Attaching and detaching implements

⚠️ **CAUTION**
To avoid personal injury:
- Be sure to stop the engine.
- Do not stand between tractor and implement unless parking brake is applied.
- Before attaching or detaching implement, locate the tractor and implement on a firm level surface.
- Whenever an implement or other attachment is connected to the tractor 3-point hitch, check full range of operation for interference, binding or PTO separation.

**Lifting Rod (Right)**
Level a 3-point mounted implement from side to side by turning the adjusting handle to shorten or lengthen the adjustable lifting rod with the implement on the ground. After adjustment, tighten the lock nut securely.

![Diagram of lifting rod](image)

(1) Adjusting handle
(2) Lock nut

**Top Link**
1. Adjust the angle of the implement to the desired position by shortening or lengthening the top link. After adjustment, tighten the lock nut securely.
2. The proper length of the top link varies according to the type of implement being used.
Telescopic Stabilizers
Adjust the telescopic stabilizers to control horizontal sway of the implement.
After aligning satisfactorily, insert the set-pin through any one of the four holes on the outer tube that align with one of the holes on the inner bar, both stabilizers will be locked.
If the set-pin is inserted through the slot to engage one of the holes on the inner bar, a limited degree of sway will be permitted.

WARNING
To avoid personal injury:
- Never pull from the top link, the rear axle or any point above the drawbar. Doing so could cause the tractor to tip over rearward causing personal injury or death.

- Adjusting Drawbar Length
When towing an implement, recommend use of (B) hole in drawbar.
The drawbar load is referred to "IMPLEMENT LIMITATIONS" section.

Lower link holder
When operating the tractor without a 3-point hitch implement, it is necessary to lock the lower links to prevent them from hitting the tractor rear wheels.

(2) Drawbar
(3) Drawbar pin
Holes : (A),(B)
Swing Drawbar (if equipped)
The drawbar can be used in three different ways as illustrated below. Assemble it correctly with joint pins set at the points as marked by ● in the figure.

1AGAMAAAP310D

Hole : A
IMPORTANT:
- Do not operate until the engine is warmed up. If operation is attempted when the engine is still cold, the hydraulic system may be damaged.
- If noises are heard when implement is lifting after the hydraulic control lever has been activated, the hydraulic mechanism is not adjusted properly. Unless corrected, the unit will be damaged. Contact your KUBOTA Dealer for adjustment.

3-POINT HITCH CONTROL SYSTEM

Position Control
This will control the working depth of 3-point implements regardless of the amount of pull required. Place the draft control lever in the lowest position and set the implement working depth with the position control lever.

Draft Control (if equipped)
This will control the pull of the 3-point implement. As the load on the 3-point hitch changes due to various soil conditions, the draft control system automatically responds to these changes by either raising or lowering the implement slightly to maintain a constant pull. Place the position control lever in the lowest position and set the implement pull with the draft control lever.

(1) Draft control lever
(2) Position control lever
(A) "SENSITIVE"
(B) "INSENSITIVE"
(C) "FLOAT"

(1) Position control lever
(2) Draft control lever
(A) "UP"
(B) "DOWN"
(C) "FLOAT"
Mixed Control
In draft control, when draft decreases, the implement automatically lowers to increase draft. However, the implement sometimes lowers too much. To limit the degree, the implement can be lowered, set the position control lever at the lowest working depth desired for the implement. Lower the draft control lever to the point where the implement is at the desired depth. This stops the implement from going too deep and causing loss of traction and ground speed.

3-point Hitch Lowering Speed

CAUTION
To avoid personal injury:
- Fast lowering speed may cause damage or injury. Lowering speed of implement should be adjusted to two or more seconds.

The lowering speed of the 3-point hitch can be controlled by adjusting the 3-point lowering speed knob.

Float Control

[with Draft control]
Place both the draft control lever and the position control lever in the float position to make the lower links move freely along with the ground conditions.

[with Position control]
Place the position control lever in the float position to make the lower links move freely along with the ground conditions.
AUXILIARY HYDRAULICS

Hydraulic Block Type Outlet

Hydraulic block type outlet is useful when adding hydraulically operated equipment such as: front end loader, front blade, etc.

When implement is attached
1. Remove the block cover.
2. Route the implement inlet, outlet, and return hoses as shown in the illustration.

REMOTE HYDRAULIC CONTROL SYSTEM (if equipped)

Double Acting Valve

Move the lever to the "FORWARD" or "REARWARD" position and hold. This will raise or lower the implement. Lever will return to neutral when released.

IMPORTANT:
- Do not hold the lever in the "REARWARD" or "FORWARD" position once the remote cylinder has reached the end of the stroke, as this will cause oil to flow through the relief valve. Forcing oil through the relief valve for extended periods will overheat the oil.
- When using the tractor hydraulic system to power front loader, do not operate boom and bucket cylinders simultaneously.

(A) "FORWARD"  (B) "REARWARD"

Remote Control Valve Coupler Connecting and Disconnecting

⚠️ CAUTION
To avoid personal injury:
- Stop the engine and relieve pressure before connecting or disconnecting lines.
- Do not use your hand to check for leaks.

- Connecting
1. Clean both couplers.
2. Remove dust plugs.
3. Insert the implement coupler to the tractor hydraulic coupler.
4. Pull the implement coupler slightly to make sure couplers are firmly connected.

- Disconnecting
1. Lower the implement first to the ground to release hydraulic pressure in the hoses.
2. Clean the couplers.
3. Relieve pressure by moving hydraulic control levers with engine shut off. Pull the hose straight from the hydraulic coupler to release it.
4. Clean oil and dust from the coupler, then replace the dust plugs.

NOTE:
- Your local KUBOTA Dealer can supply parts to adapt couplers to hydraulic hoses.

NOTE:
- To use the single-acting cylinder with the float valve, connect this cylinder to the [D] port. To extend the single acting cylinder, push the remote valve lever forward. To retract a cylinder, pull it fully rearward to the "FLOAT" position. Do not hold it in the down position, the transmission fluid may overheat.
- There are two types of double segments of remote valves available. One is without float position, the other is with float position on the second segment. Consult your local KUBOTA Dealer for further detail.
Hydraulic Control Unit Use Reference Chart

In order to handle the hydraulics properly, the operator must be familiar with the following. Though this information may not be applicable to all types of implements and soil conditions, it is useful for general conditions.

<table>

</tbody>
</table>

Remarks:
- Insert the set-pin through the slot on the outer tube that align with one of the holes on the inner bar. For implements with gauge wheels, lower the position control lever all way.
- Telescopic stabilizer should be tight enough to prevent excessive implement movement when implement is in raised position.
TIRES

| WARNING |
To avoid personal injury:
- Do not attempt to mount a tire on a rim. This should be done by a qualified person with the proper equipment.
- Always maintain the correct tire pressure. Do not inflate tires above the recommended pressure shown in the operator's manual.

IMPORTANT:
- Do not use tires other than those approved by KUBOTA.

Inflation Pressure
Though the tire pressure is factory-set to the prescribed level, it naturally drops slowly in the course of time. Thus, check it everyday and inflate as necessary.

<table>
<thead>
<tr>
<th>Tire sizes</th>
<th>Inflation Pressure</th>

</tr>
<tr>
<td>27-10.50LL15, 4PR</td>
<td>80 kPa (0.8 kgf/cm², 11 psi)</td>
</tr>
</tbody>
</table>

NOTE:
- Maintain the maximum pressure in front tires, if using a front loader or when equipped with a full load of front weights.

Dual Tires
Dual tires are not approved.

WHEEL ADJUSTMENT

| CAUTION |
To avoid personal injury:
- When working on slopes or when working with a trailer, set the wheel tread as wide as practical for maximum stability.
- Support tractor securely on stands before removing a wheel.
- Do not work under any hydraulically supported devices. They can settle, suddenly leak down, or be accidentally lowered. If necessary to work under tractor or any machine elements for servicing or adjustment, securely support them with stands or suitable blocking beforehand.
- Never operate tractor with a loose rim, wheel, or axle.

Front Wheels (with two wheel drive)
Front tread width can be adjusted as shown with the standard equipped tires.

To change the tread width
1. Remove the front axle mounting bolts and the tie-rod mounting bolts.
2. Move the front axles (right and left) to the desired position, and tighten the bolts.
3. Adjust the toe-in: [2 to 8mm (0.1 to 0.3 in.)]
   (See "Adjusting Toe-in" in Maintenance section)

(1) Front axle mounting bolt
124 to 147 N-m (12.6 to 15.0 kgf-m)(91.5 to 108.4 ft-lbs)
(2) Tie-rod mounting bolt
61 to 71 N-m (6.2 to 7.2 kgf-m)(44.8 to 52.1 ft-lbs)
(3) Tie rod clamp

<td>1335 mm (52.6 in.)</td>
<td>1435 mm (56.5 in.)</td>
<td>1535 mm (60.4 in.)</td>
</tr>
</tbody>
</table>

**IMPORTANT:**
- The front tread width for the front loader application on 2WD models should not be greater than 1280 mm (50.4 in.).

**NOTE:**
- Wheels with beveled or tapered holes: Use the tapered side of lug nut.
Front Wheels (with four wheel drive)
Front tread cannot be adjusted.

<td>1200 mm (47.2 in.)</td>
<td>1180 mm (46.5 in.)</td>
<td>1195 mm (47.0 in.)</td>
</tr>
</tbody>
</table>

NOTE:
- IND...for Industrial

IMPORTANT:
- Do not turn front discs to obtain wider tread.

NOTE:
- Wheels with beveled or tapered holes: Use the tapered side of lug nut.
Rear Wheels

Rear tread width can be adjusted as shown with the standard equipped tires.

To change the tread width
1. Remove the wheel rim and/or disk mounting bolts.
2. Change the position of the rim and/or disk (right and left) to the desired position, and tighten the bolts.

<td>1545 mm (60.8 in.)</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

IMPORTANT:
- Always attach tires as shown in the drawings.
- If not attached as illustrated, transmission parts may be damaged.
- When re-fitting or adjusting a wheel, tighten the bolts to the following torques then recheck after driving the tractor 200m (200 yards) and thereafter according to service interval.

(See "MAINTENANCE" section)

(1) 137 N·m (14 kgf·m, 100 ft·lbs)
(2) 215 N·m (22 kgf·m, 160 ft·lbs)
BALLAST

⚠️ CAUTION
To avoid personal injury:
- Additional ballast will be needed for transporting heavy implements. When the implement is raised, drive slowly over rough ground, regardless of how much ballast is used.
- Do not fill the front wheels with liquid to maintain steering control.

◆ Front Ballast
Add weights if needed for stability (2WD, 4WD models) and improve traction (4WD model). Heavy pulling and heavy rear mounted implements tend to lift front wheels. Add enough ballast to maintain steering control and prevent tip over. Remove weight when no longer needed.

◆ Front End Weights (option)
The front end weights can be attached to the bumper. See your implement operator’s manual for required number of weights or consult your local KUBOTA Dealer to use.

◆ Rear Ballast
Add weight to rear wheels if needed to improve traction or for stability. The amount of rear ballast should be matched to job and the ballast should be removed when it is not needed. The weight should be added to the tractor in the form of liquid ballast, rear wheel weights or a combination of both.

◆ Rear Wheel Weights (option)
The rear wheel weights can be attached to the rear wheel. See your implement operator’s manual for required number of weights or consult your local KUBOTA Dealer to use.

![Diagram of a tractor with weights](1AGAMAAAP320A)

(1) Rear wheel weights

![Diagram of tractor parts](1AGAMAAAP320B)

(1) Rear wheel weights
(2) Bumper

**IMPORTANT:**
- Do not overload tires.
- Add no more weight than indicated in chart.

| Maximum weight per wheel | 28 kg x 3 Pieces (185 lbs.) |

**NOTE:**
- The front end weights can be attached to the bumper (option on 4WD models).
Liquid Ballast in Rear Tires

Water and calcium chloride solution provides safe economical ballast. Used properly, it will not damage tires, tubes or rims. The addition of calcium chloride is recommended to prevent the water from freezing. Use of this method of weighting the wheels has the full approval of the tire companies. See your tire dealer for this service.

**IMPORTANT:**
- The jobs indicated by © must be done after the first 50 hours of operation.
- *1 Air cleaner should be cleaned more often in dusty conditions than in normal conditions.
- *2 Every year or every 6 times of cleaning.
- *3 Replace only if necessary.
- *4 Consult your local KUBOTA Dealer for this service.
- *5 When the battery is used for less than 100 hours per year, check the battery condition by reading the indicator annually.
- The items listed above (@ marked) are registered as emission related critical parts by KUBOTA in the U.S. EPA nonroad emission regulation. As the engine owner, you are responsible for the performance of the required maintenance on the engine according to the above instruction. Please see Warranty Statement in detail.

**NOTE:**
- *KUBOTA UDT or SUPER UDT fluid --- KUBOTA original transmission hydraulic fluid*

**NOTE:**
- Engine Oil:
- Oil used in the engine should have an American Petroleum Institute (API) service classification and Proper SAE Engine Oil according to the ambient temperatures as shown above.
- With the emission control now in effect, the CF-4 and CG-4 lubricating oils have been developed for use of a low-sulfur fuel on on-road vehicle engines. When an off-road vehicle engine runs on a high-sulfur fuel, it is advisable to employ the CF, CD or CE lubricating oil with a high total base number. If the CF-4 or CG-4 lubricating oil is used with a high-sulfur fuel, change the lubricating oil at shorter intervals.
- Lubricating oil recommended when a low-sulfur or high-sulfur fuel employed.

</tbody>
</table>
- Transmission oil
  The oil used to lubricate the transmission is also used as hydraulic fluid. To insure proper operation of the hydraulic system and complete lubrication of the transmission, it is important that a multi-grade transmission fluid be used in this system. We recommend the use of **KUBOTA SUPER UDT fluid** for optimum protection and performance.
  (Consult your local KUBOTA Dealer for further detail.)
  Do not mix different brands or grades.
- Indicated capacity of water and oil are manufacturer’s estimate.
CAUTION
To avoid personal injury:
- Do not work under any hydraulically supported devices. They can settle, suddenly leak down, or be accidentally lowered. If necessary to work under tractor or any machine elements for servicing or adjustment, securely support them with stands or suitable blocking beforehand.

HOW TO OPEN THE HOOD

CAUTION
To avoid personal injury from contact with moving parts;
- Never open the hood while the engine is running.
- Do not touch muffler or exhaust pipes while they are hot; Severe burns could result.
- Support hood with other hand while unlocking support link.

Hood
To open the hood, twist the mascot to release the latch and open the hood.

NOTE:
- To close the hood, hold the hood and release the support link.
**Side Cover**

1. Remove the bolts at the both sides and detach the side cover.
2. To attach the side cover, insert the bottom pin of side cover first, and then tighten the bolts.

**Front Cover**

1. Remove the bolts at the both sides and detach the front cover.
2. To attach the front cover, fit 3 grooves on the front cover and then tighten the bolts.

---

**DAILY CHECK**

For your own safety and maximum service life of the machine, make a thorough daily inspection before operating the machine to start the engine.

⚠️ **CAUTION**

To avoid personal injury:
- Be sure to check and service the tractor on a flat place with the engine shut off and the parking brake "ON".

**Walk Around Inspection**

Look around and under the tractor for such items as loose bolts, trash build-up, oil or coolant leaks, broken or worn parts.

**Checking and Refueling**

⚠️ **CAUTION**

To avoid personal injury:
- Do not smoke while refueling.
- Be sure to stop the engine before refueling.

1. Turn the key switch to "ON", check the amount of fuel by fuel gauge.
2. Fill fuel tank when fuel gauge shows 1/4 or less fuel in tank.
3. Use grade No.2-Diesel fuel at temperatures above -10 °C (14 °F).
   Use grade No.1-Diesel fuel at temperatures below -10 °C (14 °F).

---

**Fuel tank capacity**

| 42 L (11.1 U.S.gals.) |
IMPORTANT:
- Do not permit dirt or trash to get into the fuel system.
- Be careful not to let the fuel tank become empty, otherwise air will enter the fuel system, necessitating bleeding before next engine start.
- Be careful not to spill during refueling. If should spill, wipe it off at once, or it may cause a fire.
- To prevent condensation (water) accumulation in the fuel tank, fill the tank before parking overnight.

NOTE:
- No.2-D is a distillate fuel of lower volatility for engines in industrial and heavy mobile service.
  (SAE J313 JUN87)
- Grade of Diesel Fuel Oil According to ASTM D975

Checking Engine Oil Level

⚠️ CAUTION
To avoid personal injury:
- Be sure to stop the engine before checking the oil level.

1. Park the machine on a flat surface.
2. Check engine oil before starting the engine or 5 minutes or more after the engine has stopped.
3. To check the oil level, draw out the dipstick, wipe it clean, replace it, and draw it out again. Check to see that the oil level lies between the two notches. If the level is too low, add new oil to the prescribed level at the oil inlet.
(See "LUBRICANTS" in Maintenance section)

(1) Oil inlet

(1) Dipstick

(A) Oil level is acceptable within this range.

IMPORTANT:
- When using an oil of different maker or viscosity from the previous one, remove all of the old oil. Never mix two different types of oil.
- If oil level is low, do not run engine.
■ Checking Transmission Fluid Level
1. Park the machine on a flat surface, lower the implement and shut off engine.
2. View the fluid level through the fluid level gauge. If the level is too low, add new oil to the prescribed level at the oil inlet.
   (See "LUBRICANTS" in Maintenance Section)

■ Checking Coolant Level

⚠️ CAUTION
To avoid personal injury:
- Do not remove radiator cap while coolant is hot. When cool, slowly rotate cap to the first stop and allow sufficient time for excess pressure to escape before removing the cap completely.

1. Check to see that the coolant level is between the "FULL" and "LOW" marks of recovery tank.
2. When the coolant level drops due to evaporation, add water only up to the full level.
   In case of leakage, add anti-freeze and water in the specified mixing ratio up to the full level.
   (See "Flush Cooling System and Changing Coolant" in every 2 years maintenance)

---

IMPORTANT:
- If oil level is low, do not run engine.

---

1AGAPAJAP024A

(1) Gauge     (A) Oil level is acceptable within this range.
(2) Oil inlet

---

1AGAPAJAP022C

(1) Recovery tank     (A) "FULL"
(B) "LOW"

IMPORTANT:
- If the radiator cap has to be removed, follow the caution above and securely retighten the cap.
- Use clean, fresh water and anti-freeze to fill the recovery tank.
- If water should leak, consult your local KUBOTA Dealer.
■ Cleaning Grill and Radiator Screen

⚠️ CAUTION
To avoid personal injury:
- Be sure to stop the engine before removing the screen.

1. Loosen the knob bolt and move the air cleaner to the left.
2. Check front grill to be sure it is clean from debris.
3. Detach the screen and remove all the foreign material.

(1) Radiator screen
(2) Knob bolt

IMPORTANT:
- Grill and screen must be clean from debris to prevent engine from overheating and to allow good air intake for the air cleaner.

■ Checking Gauges, Meter and Easy Checker(TM)
1. Inspect the instrument panel for broken gauge(s), meter(s) and Easy Checker(TM) lamps.
2. Replace if broken.

■ Checking Head Light, Hazard Light etc.
1. Inspect the lights for broken bulbs and lenses,
2. Replace if broken.

■ Checking Seat Belt and ROPS
1. Always check condition of seat belt and ROPS attaching hardware before operating tractor.
2. Replace if damaged.

■ Checking Brake Pedals and Clutch Pedal

⚠️ WARNING
To avoid personal injury:
- Be sure brake pedals have equal adjustment when using locked together. Incorrect or unequal brake pedal adjustment can cause the tractor to swerve or roll-over.

1. Inspect the brake and clutch pedals for free travel, and smooth operation.
2. Adjust if incorrect measurement is found:
   (See "Adjusting Clutch and Brake Pedal" in every 100 hours maintenance)
EVERY 50 HOURS

Lubricating Grease Fittings
Apply a small amount of multipurpose grease to the following points every 50 hours:
If you operated the machine in extremely wet and muddy conditions, lubricate grease fittings more often.

(1) Grease fitting (Knuckle shaft) [RH, LH]

When applying a grease to forward front axle support, remove the breather plug and apply a grease until grease overflows from breather plug port.
After greasing reinstall the breather plug.

(1) Grease fitting (Top link)
(2) Grease fitting (Lifting rod) [RH]
(3) Grease fitting (Top link bracket) (with draft control) (if equipped)

(1) Battery terminals
Checking Engine Start System

⚠️ CAUTION
To avoid personal injury:
• Do not allow anyone near the tractor while testing.
• If the tractor does not pass the test do not operate the tractor.

◆ Preparation before testing.
1. Place all control levers in the "NEUTRAL" position.
2. Set the parking brake and stop the engine.

◆ Test: Switch for the PTO clutch control lever.
1. Sit on the operator's seat.
2. Shift the PTO clutch control lever to "ON" position.
3. Depress the clutch pedal fully.
4. Shift the range gear shift lever to the neutral position.
5. Turn the key to "START" position.
6. The engine must not crank.
7. If it cranks, consult your local KUBOTA Dealer for this service.

◆ Test: Switch for the range gear shift lever.
1. Sit on the operator's seat.
2. Shift the PTO clutch control lever to "OFF" position.
3. Shift the range gear shift lever to "L", "H" or "R" position.
4. Depress the clutch pedal fully.
5. Turn the key to "START" position.
6. The engine must not crank.
7. If it cranks, consult your local KUBOTA Dealer for this service.

◆ Test: Switch for the operator's seat
1. Sit on the operator's seat.
2. Depress the clutch pedal fully.
3. Start the engine.
4. Engage the PTO gear shift lever.
5. Stand up. (Do not get off the machine.)
6. The engine must shut off after approximately 1 second.
7. If it does not stop, consult your local KUBOTA Dealer for this service.
Checking Wheel Bolt Torque

CAUTION
To avoid personal injury:
- Never operate tractor with a loose rim, wheel, or axle.
- Any time bolts and nuts are loosened, retighten to specified torque.
- Check all bolts and nuts frequently and keep them tight.

Check wheel bolts and nuts regularly especially when new. If they are loose, tighten them as follows.

(1) 137 N-m (14 kgf-m, 100 ft-lbs)
(2) 215 N-m (22 kgf-m, 160 ft-lbs)

EVERY 100 HOURS

Changing Engine Oil

CAUTION
To avoid personal injury:
- Be sure to stop the engine before changing the oil.
- Allow engine to cool down sufficiently, oil can be hot and can burn.

1. To drain the used oil, remove the drain plug at the bottom of the engine and drain the oil completely into the oil pan.
   All the used oil can be drained out easily when the engine is still warm.
2. After draining reinstall the drain plug.
3. Fill with the new oil up to the upper notch on the dipstick.
   (See "LUBRICANTS" in Maintenance section)

Oil capacity with filter 7.6 L (8.0 U.S. qts.)

(1) Oil inlet

(1) Dipstick  (A) Oil level is acceptable within this range
Cleaning Air Cleaner Primary Element

1. Remove the air cleaner cover and primary element.
2. Clean the primary element:
   (1) When dry dust adheres to the element, blow compressed air from the inside, turning the element. Pressure of compressed air must be under 205 kPa (2.1 kgf/cm², 30 psi).
   (2) When carbon or oil adheres to the element, soak the element in detergent for 15 minutes then wash it several times in water, rinse with clean water and dry it naturally. After element is fully dried, inspect inside of the element with a light and check if it is damaged or not.
3. Replace air cleaner primary element:
   Once yearly or after every sixth cleaning, whichever comes first.

NOTE:
- Check to see if the evacuator valve is blocked with dust.

IMPORTANT:
- The air cleaner uses a dry element, never apply oil.
- Do not run the engine with filter element removed.
- Be sure to refit the cover with the arrow † (on the rear of cover) upright. If the cover is improperly fitted, evacuator valve will not function and dust will adhere to the element.
- Do not touch the secondary element except in cases where replacing is required.
  (See "Replacing Air Cleaner Secondary Element" in Every 1 Year maintenance)

Evacuator Valve
Open the evacuator valve once a week under ordinary conditions - or daily when used in a dusty place - to get rid of large particles of dust and dirt.
- **Cleaning Fuel Filter**
  This job should not be done in the field, but in a clean place.
  1. Close the fuel cock.
  2. Unscrew the screw ring and remove the filter bowl, and rinse the inside with kerosene.
  3. Take out the element and dip it in the kerosene to rinse.
  4. After cleaning, reassemble the fuel filter, keeping out dust and dirt.
  5. Bleed the fuel system.
  (See "Bleeding Fuel System" in service as required.)

- **Adjusting Fan Belt Tension**

  ! **CAUTION**
  To avoid personal injury:
  - Be sure to stop the engine before checking belt tension.

  | Proper fan belt tension | A deflection of between 7 to 9 mm (0.28 to 0.34 in.) when the belt is pressed in the middle of the span. |

  1. Stop the engine and remove the key.
  2. Apply moderate thumb pressure to belt between pulleys.
  3. If tension is incorrect, loosen the alternator mounting bolts and, using a lever placed between the alternator and the engine block, pull the alternator out until the deflection of the belt falls within acceptable limits.
  4. Replace fan belt if it is damaged.

**IMPORTANT:**
- If dust and dirt enters the fuel system, the fuel pump and injection nozzles are subject to premature wear. To prevent this, be sure to clean the fuel filter bowl and element periodically.
- Adjusting Clutch Pedal

| Proper clutch pedal free travel | 20 to 30 mm (13/16 to 1-3/16 in.) on the pedal |

- Adjusting procedure
  1. Stop the engine and remove the key.
  2. Slightly depress the clutch pedal and measure free travel at top of pedal stroke.
  3. If adjustment is needed, loosen the lock nut, remove the cotter pin and adjust the rod length within acceptable limits.
  4. Retighten the lock nut and split the cotter pin.

- Adjusting Brake Pedal

⚠️ CAUTION
To avoid personal injury:
- Stop the engine and chock the wheels before checking brake pedal.

| Proper brake pedal free travel | 15 to 20 mm (5/8 to 13/16 in.) on the pedal | Keep the free travel in the right and left brake pedals equal. |

1. Release the parking brake.
2. Slightly depress the brake pedals and measure free travel at the top of pedal stroke.
3. If adjustment is needed, loosen the lock nut and turn the turnbuckle to adjust the rod length within acceptable limits.
4. Retighten the lock nut.

(2) Nut
(3) Cotter pin

1AGAPA076B

(1) Lock nut
(2) Turnbuckle
Checking Fuel Line

1. Check to see that all lines and hose clamps are tight and not damaged.
2. If hoses and clamps are found worn or damaged, replace or repair them at once.

NOTE:
- If the fuel line is removed, be sure to properly bleed the fuel system.
  (See ‘Bleeding Fuel System’ in as required maintenance)

Checking Battery Condition

DANGER
To avoid the possibility of battery explosion:
For the refillable type battery, follow the instructions below.
- Do not use or charge the refillable type battery if the fluid level is below the LOWER (lower limit level) mark. Otherwise, the battery component parts may prematurely deteriorate, which may shorten the battery's service life or cause an explosion. Check the fluid level regularly and add distilled water as required so that the fluid level is between the UPPER and LOWER levels.

CAUTION
To avoid personal injury:
- Never remove the vent caps while the engine is running.
- Keep electrolyte away from eyes, hands and clothes. If you are spattered with it, wash it away completely with water immediately and get medical attention.
- Wear eye protection and rubber gloves when working around the battery.

The factory-installed battery is of non-refillable type. If the indicator turns white, do not charge the battery but replace it with new one.

Mishandling the battery shortens the service life and adds to maintenance costs.
The original battery is maintenance free, but needs some servicing.
If the battery is weak, the engine will be difficult to start and the lights will be dim. It is important to check the battery periodically.
How to read the indicator
Check the battery condition by reading the indicator.

<table>
<thead>
<tr>
<th>State of indicator display</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Green</td>
<td>Specific gravity of electrolyte and quality of electrolyte are both in good condition.</td>
</tr>
<tr>
<td>Black</td>
<td>Needs charging battery.</td>
</tr>
<tr>
<td>White</td>
<td>Needs changing battery.</td>
</tr>
</tbody>
</table>

Battery Charging

⚠️ CAUTION
To avoid personal injury:
- When the battery is being activated, hydrogen and oxygen gases in the battery are extremely explosive. Keep open sparks and flames away from the battery at all times, especially when charging the battery.
- When charging the battery, ensure the vent caps are securely in place. (if equipped)
- When disconnecting the cable from the battery, start with the negative terminal first.
- When connecting the cable to the battery, start with the positive terminal first.
- Never check battery charge by placing a metal object across the posts.
  Use a voltmeter or hydrometer.

4. When exchanging an old battery for a new one, use battery of equal specification shown in table 1.

<table>
<thead>
<tr>
<th>Battery TYPE</th>

<td>133</td>
<td>582</td>
<td>6.5</td>
</tr>
</tbody>
</table>

CCA : Cold Cranking Ampere

Direction for Storage
1. When storing the tractor for a long period, remove the battery from tractor, adjust the electrolyte to the proper level and store in a dry place out of direct sunlight.
2. The battery self-discharges while it is stored. Recharge it once every three months in hot seasons and once every six months in cold seasons.

1AGAPAJAP018B

(1) Battery

1. To slow charge the battery, connect the battery positive terminal to the charger positive terminal and the negative to the negative, then recharge in the standard fashion.
2. A boost charge is only for emergencies. It will partially charge the battery at a high rate and in a short time. When using a boost-charged battery, it is necessary to recharge the battery as early as possible. Failure to do this will shorten the battery’s service life.
3. The battery is charged if the indicator display turns green from black.
EVERY 200 HOURS

Replacing Engine Oil Filter

**CAUTION**
To avoid personal injury:
- Be sure to stop the engine before changing the oil filter cartridge.
- Allow engine to cool down sufficiently, oil can be hot and can burn.

1. Remove the oil filter.
2. Put a film of clean engine oil on the rubber seal of the new filter.
3. Tighten the filter quickly until it contacts the mounting surface.
   Tighten filter by hand an additional 1/2 turn only.
4. After the new filter has been replaced, the engine oil normally decreases a little. Make sure that the engine oil does not leak through the seal and be sure to check the oil level on the dipstick. Then, replenish the engine oil up to the prescribed level.

**IMPORTANT:**
- To prevent serious damage to the engine, use only a KUBOTA genuine filter.

---

Replacing Hydraulic Oil Filter

**CAUTION**
To avoid personal injury:
- Be sure to stop the engine before changing the oil filter cartridge.
- Allow engine to cool down sufficiently, oil can be hot and can burn.

1. Remove the drain plug at the bottom of the transmission case and drain the oil completely into the oil pan.
2. After draining reinstall the drain plug.

3. Remove the oil filter.

4. Put a film of clean transmission oil on the rubber seal of the new filter.
5. Quickly tighten the filter until it contacts the mounting surface, then tighten it by hand an additional 1/2 turn only.
6. After the new filter has been replaced, fill with oil up to the upper line of the gauge.
Checking Radiator Hose and Clamp

Check to see if radiator hoses are properly fixed every 200 hours of operation or six months, whichever comes first.

1. If hose clamps are loose or water leaks, tighten bands securely.
2. Replace hoses and tighten hose clamps securely, if radiator hoses are swollen, hardened or cracked.

Replace hoses and hose clamps every 2 years or earlier if checked and found that hoses are swollen, hardened or cracked.

Precaution at Overheating

Take the following actions in the event the coolant temperature is nearly or more than the boiling point, what is called "Overheating"

1. Park the tractor in a safe place and keep the engine unloaded idling.
2. Don't stop the engine suddenly, but stop it after about 5 minutes of unloaded idling.
3. Keep yourself well away from the machine for further 10 minutes or while the steam blows out.
4. Check that there are no dangers such as burns. Get rid of the causes of overheating according to the manual, see "Troubleshooting" section, and then, start again the engine.
**Checking Intake Air Line**

1. Check to see that hoses and hose clamps are tight and not damaged.
2. If hoses and clamps are found worn or damaged, replace or repair them at once.

![Image 1AGAPAJP022A]  
(1) Hose
(2) Hose clamps

**Checking Power Steering Line**

1. Check to see that all lines and hose clamps are tight and not damaged.
2. If hoses and clamps are found worn or damaged, replace or repair them at once.

![Image 1AGAPAJP021B]  
(1) Power steering pressure hoses

**Adjusting Toe-in**

1. Park tractor on a flat place.
2. Turn steering wheel so front wheels are in the straight ahead position.
3. Lower the implement, lock the park brake and stop the engine.
4. Measure distance between tire beads at front of tire, hub height.
5. Measure distance between tire beads at rear of tire, hub height.
6. Front distance should be 2 to 8mm (1/16 to 5/16 in.) less than rear distance. If not, adjust tie rod length.

![Image 1AGAPAJP072A]  
(A) Wheel - to - wheel distance at rear  
(B) Wheel - to - wheel distance at front  
(C) "FRONT"

**Adjusting procedure [4WD]**

1. Detach the snap ring.
2. Loosen the tie-rod nut.
3. Turn the tie-rod joint to adjust the rod length until the proper toe-in measurement is obtained.
4. Retighten the tie-rod nut.
5. Attach the snap ring of the tie-rod joint.

![Image 1AGAPAJP023A]  
(1) Snap ring  
(2) Tie-rod nut (167 to 196 N·m, 17 to 20 kgf·m)  
(3) Tie-rod joint
Adjusting procedure [2WD]
1. Detach the snap ring.
2. Loosen the tie-rod nut.
3. Turn the tie-rod joint to adjust the rod length until the proper toe-in measurement is obtained.
4. Retighten the tie-rod nut.
5. Attach the snap ring of the tie-rod joint.

EVERY 400 HOURS

■ Changing Transmission Fluid

⚠️ CAUTION
To avoid personal injury:
- Allow engine to cool down sufficiently, oil can be hot and can burn.

1. To drain the used oil, remove the drain plug at the bottom of the transmission case and drain the oil completely into the oil pan.
2. After draining, reinstall the drain plug.
3. Fill with the new KUBOTA SUPER UDT fluid up to the upper line of the gauge. (See "LUBRICANTS" in Maintenance Section).
4. After running the engine for a few minutes, stop it and check the oil level again; add oil to prescribed level.

<table>
<thead>
<tr>
<th>Oil capacity</th>
<th>40 L (10.6 U.S.gals.)</th>
</tr>
</thead>
</table>

(1) Gauge
(A) Oil level is acceptable within this range
(2) Oil filling plug

(1) Drain plugs
**IMPORTANT:**
- Do not operate the tractor immediately after changing the transmission fluid.
  Run the engine at medium speed for a few minutes to prevent damage to the transmission.

- **Replacing Fuel Filter Element**
  (See "Cleaning fuel filter" in every 100 hours maintenance)

- **Changing Front Axle Case Oil**
  1. To drain the used oil, remove the right and left drain plugs and filling plug at the front axle case and drain the oil completely into the oil pan.
  2. After draining reinstall the drain plugs.
  3. Remove the oil level check plug.
  4. Fill with the new oil up to the check plug port.
     (See "LUBRICANTS" in Maintenance section)
  5. After filling reinstall the filling plug and check plug.

<table>
<thead>
<tr>
<th>Oil capacity</th>
<th>6.5L (6.9 U.S.qts.)</th>

  Detach the cover, and apply bearing grease.

(1) Front wheel hub cover
EVERY 600 HOURS

- Adjusting Front Axle Pivot
  If the front axle pivot pin adjustment is not correct, front wheel vibration can occur causing vibration in the steering wheel.

  ◆ Adjusting procedure
  Loosen the lock nut, tighten the adjusting screw all the way, and then loosen the screw by 1/8 turn. Retighten the lock nut.

EVERY 800 HOURS

- Adjusting Engine Valve Clearance
  Consult your local KUBOTA Dealer for this service.

EVERY 2 YEARS

- Flush Cooling System and Changing Coolant

  ❞ CAUTION
  To avoid personal injury:
  - Do not remove radiator cap while coolant is hot. When cool, slowly rotate cap to the first stop and allow sufficient time for excess pressure to escape before removing the cap completely.

  1. Stop the engine, remove the key and let cool down.
  2. To drain the coolant, open the radiator drain cock, and remove radiator cap. The radiator cap must be removed to completely drain the coolant.
  3. After all coolant is drained, close the drain cock.
  4. Fill with clean water and cooling system cleaner.
  5. Follow directions of the cleaner instruction.
  6. After flushing, fill with clean water and anti-freeze until the coolant level is just below the radiator cap. Install the radiator cap securely.
  7. Fill with coolant up to the "FULL" mark of recovery tank.
  8. Start and operate the engine for few minutes.
  9. Stop the engine, remove the key and let cool.
  10. Check coolant level of recovery tank and add coolant if necessary.
  11. Properly dispose of used coolant.

| Coolant capacity | 6.5 L (6.9 U.S.qts.) |

EVERY 1500 HOURS

- Checking Fuel Injection Nozzle Injection Pressure
  Consult your local KUBOTA Dealer for this service.

EVERY 3000 HOURS

- Checking Injection Pump
  Consult your local KUBOTA Dealer for this service.

EVERY 1 YEAR

- Replacing Air Cleaner Primary Element and Secondary Element
  (See "Cleaning Air Cleaner Primary Element" in every 100 hours maintenance)
1. Long-life coolant (hereafter LLC) comes in several types. Use ethylene glycol (EG) type for this engine.
2. Before employing LLC-mixed cooling water, fill the radiator with fresh water and empty it again. Repeat this procedure 2 or 3 times to clean up the inside.
3. Mixing the LLC
   - Put the LLC in cooling water in the percentage (%) for a target temperature. When mixing, stir it up well, and then fill into the radiator.
4. The procedure for the mixing of water and antifreeze differs according to the make of the antifreeze and the ambient temperature. Refer to SAE J1034 standard, more specifically also to SAE J814c.

**IMPORTANT:**
- When the antifreeze is mixed with water, the antifreeze mixing ratio must be less than 50%.

<table>
<thead>
<tr>
<th>Vol %</th>
<th>Freezing Point</th>
<th>Boiling Point*</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>°C</td>
<td>°F</td>
</tr>
<tr>
<td>40</td>
<td>-24</td>
<td>-12</td>
</tr>
<tr>
<td>50</td>
<td>-37</td>
<td>-34</td>
</tr>
</tbody>
</table>

* At 1.013 x 10^5 Pa (760mmHg) pressure (atmospheric). A higher boiling point is obtained by using a radiator pressure cap which permits the development of pressure within the cooling system.

5. Adding the LLC
   1. Add only water if the mixture reduces in amount by evaporation.
   2. If there is a mixture leak, add the LLC of the same manufacturer and type in the same mixture percentage.
   - Never add any long-life coolant of different manufacturer. (Different brands may have different additive components, and the engine may fail to perform as specified.)

6. When the LLC is mixed, do not employ any radiator cleaning agent. The LLC contains anticorrosive agent. If mixed with the cleaning agent, sludge may build up, adversely affecting the engine parts.

7. Kubota’s genuine long-life coolant has a service life of 2 years. Be sure to change the coolant every 2 years.

**NOTE:**
- The above data represent industry standards that necessitate a minimum glycol content in the concentrated antifreeze.
- When the coolant level drops due to evaporation, add water only to keep the antifreeze mixing ratio less than 50%. In case of leakage, add antifreeze and water in the specified mixing ratio before filling in to the radiator.

If it freezes, coolant can damage the cylinders and radiator. If the ambient temperature falls below 0 °C (32 °F) or before a long-term storage, let out cooling water completely, or mix fresh water with long-life coolant and fill the radiator and reserve tank with the mixture.
SERVICE AS REQUIRED

■ Bleeding Fuel System
Air must be removed:
1. When the fuel filter or lines are removed.
2. When tank is completely empty.
3. After the tractor has not been used for a long period of time.

◆ Bleeding procedure is as follows:
1. Fill the fuel tank with fuel, and open the fuel cock.

(1) Fuel cock (A) "CLOSE"
(2) Air vent cock (B) "OPEN"

2. Open the air vent cock on the fuel injection pump.
3. Start the engine and run for about 30 seconds, and then stop the engine.
4. Close the air vent cock.

IMPORTANT:
- Always close the air vent cock except for bleeding fuel lines.
  Otherwise, engine runs irregularly or stalls frequently.
**Draining Clutch Housing Water**

The tractor is equipped with split pin plug under the clutch housing.

After operating in rain, snow or tractor has been washed, water may get into the clutch housing. Check it by pushing in the split pin.

If water enters into the clutch housing, remove the plug and drain the water, then install the plug again.

**Replacing Fuse**

The tractor electrical system is protected from potential damage by fuses.

A blown fuse indicates that there is an overload or short somewhere in the electrical system.

If any of the fuses should blow, replace with a new one of the same capacity.

**IMPORTANT:**

- Before replacing a blown fuse, determine why the fuse blew and make any necessary repairs. Failure to follow this procedure may result in serious damage to the tractor electrical system. Refer to the troubleshooting section of this manual or your local KUBOTA Dealer for specific information dealing with electrical problems.

</tbody>
</table>
CAUTION
To avoid personal injury:
- Do not clean the machine while the engine is running.
- To avoid the danger of exhaust fume poisoning, do not operate the engine in a closed building without proper ventilation.
- When storing, remove the key from the key switch to avoid unauthorized persons from operating the tractor and getting injured.

TRACTOR STORAGE
If you intend to store your tractor for an extended period of time, follow the procedures outlined below.
These procedures will insure that the tractor is ready to operate with minimum preparation when it is removed from storage.
1. Check the bolts and nuts for looseness, and tighten if necessary.
2. Apply grease to tractor areas where bare metal will rust also to pivot areas.
3. Detach the weights from the tractor body.
4. Inflate the tires to a pressure a little higher than usual.
5. Change the engine oil and run the engine to circulate oil throughout the engine block and internal moving parts for about five minutes.
6. Keep the clutch disengaged. If the clutch is left engaged for a long period of time, the clutch plate may rust, making clutch disengagement impossible at the next operation.

8. Remove the battery from the tractor. Store the battery following the battery storage procedures.
(See "Battery condition" in every 100 hours in periodic service section)
9. Keep the tractor in a dry place where the tractor is sheltered from the elements. Cover the tractor.
10. Store the tractor indoors in a dry area that is protected from sunlight and excessive heat. If the tractor must be stored outdoors, cover it with a waterproof tarpaulin. Jack the tractor up and place blocks under the front and rear axles so that all four tires are off the ground. Keep the tires out of direct sunlight and extreme heat.

IMPORTANT:
- When washing the tractor, be sure to stop the engine. Allow sufficient time for the engine to cool before washing.
- Cover the tractor after the muffler and the engine have cooled down.

REMOVING THE TRACTOR FROM STORAGE
1. Check the tire air pressure and inflate the tires if they are low.
2. Jack the tractor up and remove the support blocks from under the front and rear axles.
3. Install the battery. Before installing the battery, be sure it is fully charged.
4. Check the fan belt tension.
5. Check all fluid levels (engine oil, transmission/hydraulic oil, engine coolant and any attached implements).
6. Start the engine. Observe all gauges. If all gauges are functioning properly and reading normal, move the tractor outside. Once outside, park the tractor and let the engine idle for at least five minutes. Shut the engine off and walk around tractor and make a visual inspection looking for evidence of oil or water leaks.
7. With the engine fully warmed up, release the parking brake and test the brakes for proper adjustment as you move forward. Adjust the brakes as necessary.
# ENGINE TROUBLESHOOTING

If something is wrong with the engine, refer to the table below for the cause and its corrective measure.

<table>
<thead>
<tr>
<th>Trouble</th>
<th>Cause</th>
<th>Countermeasure</th>
</tr>
</thead>
<tbody>
<tr>
<td>No fuel flow.</td>

KUBOTA Corporation is ... 

Since its inception in 1890, KUBOTA Corporation has grown to rank as one of the major firms in Japan.

To achieve this status, the company has through the years diversified the range of its products and services to a remarkable extent, until today, 19 plants and 16,000 employees produce over 1,000 different items, large and small.

All these products and all the services which accompany them, however, are unified by one central commitment. KUBOTA makes products which, taken on a national scale, are basic necessities. Products which are indispensable, products intended to help individuals and nations fulfill the potential inherent in their environment. For KUBOTA is the Basic Necessities Giant.

This potential includes water supply, food from the soil and from the sea, industrial development, architecture and construction, and transportation.

Thousands of people depend on KUBOTA's know-how, technology, experience and customer service. You too can depend on KUBOTA.
